

Status of Education and Vocational Training in India 2004-05

NSS 61st ROUND (July 2004 – June 2005)

National Sample Survey Organisation
Ministry of Statistics & Programme Implementation
Government of India

December 2006

PREFACE

The NSSO has been collecting comprehensive data on educational particulars of household members as a part of decennial surveys on social consumption. The last such survey was carried out in the 52nd round (July 1995 – June 1996). While collecting the detailed information on employment-unemployment in the NSS 61st round (July 2004 – June 2005), information on some general particulars of households members such as age, sex, level of general and technical education, current attendance in educational institution, vocational training received, etc. was also collected in the survey. This report presents the results of the education particulars of the household members collected in the survey.

This report, third in the series of seven reports based on employment-unemployment data of the NSS 61st round, provides some broad features of literacy, attainment of general and technical education, current attendance in educational institutions, etc. among the people in India. This report contains three Chapters including the introductory chapter and three Appendices. Chapter two describes in detail the Concepts & Definitions of terms used in the survey in connection with various items covered in this report. The main findings of the survey have been discussed in Chapter three. The detailed all-India tables on which this report is based are presented in Appendix-A. Detailed description of the sample design and estimation procedures is included in Appendix-B. A facsimile of the schedule of enquiry canvassed in the field is at Appendix-C.

The Survey Design and Research Division (SDRD) of the NSSO undertook the development of the survey methodology as well as drafting of the report. The field work was carried out by the Field Operation Division (FOD) of NSSO while the data processing and tabulation work was handled by Data Processing Division (DPD) of NSSO. The Co-ordination and Publication division (CPD) of NSSO coordinated various activities pertaining to the survey.

I am thankful to the Chairman and the Members of the then Governing Council and Working Group for the NSS 61st round for their valuable guidance at various stages of survey activities from designing of the questionnaire to the preparation of this report. I also place on record my thanks to various officers of different divisions of the NSSO involved in the preparation of this report

I hope, this report will prove useful to the planners, policy makers, academicians and researchers. Suggestions from readers for improvement of the content of the report will be highly appreciated.

(Vishnu Kumar)
Director General & Chief Executive Officer
NSSO

New Delhi December 2006

| Table 11 | Per 1000 distribution of persons in the age group 15-29 years who received/were receiving formal vocational training by duration of training for each field of training | A- 55 – A- 81 |
| Table 12 | Per 1000 distribution of persons in the age group 15-29 years who received/ were receiving formal vocational training by field of training for each broad usual principal activity status | A-82 – A-108 |
| Table 13 | Per 1000 distribution of persons in the age group 15-29 who received/ were receiving formal vocational training by source of training for each broad usual principal activity status | A-109 – A-135 |
| Table 14 | Per 1000 distribution of persons by general educational level for each usual activity category taking into consideration the subsidiary economic status of persons categorised 'not working' in the principal status | A-136 – A-144 |

HIGHLIGHTS

This report is based on the seventh quinquennial survey on employment and unemployment conducted in the 61st round of NSS during July, 2004 to June, 2005. The survey was spread over 7,999 villages and 4,602 urban blocks covering 1,24,680 households (79,306 in the rural areas and 45,374 in the urban) and enumerating 6,02,833 persons (3,98,025 in the rural areas and 2,04,808 in the urban). Some of the key findings relating to the estimates on literacy, attainment of general and technical education, current attendance in educational institutions, vocational training received, etc., among the people in India, are stated below:

- About 73 per cent of the households belonged to rural India and these accounted for nearly 75 per cent of the total population.
- In about 26 per cent of the households in the rural areas and about 8 per cent those in the urban areas, there was not a single member of age 15 years or above who could read and write a simple message with understanding.
- About 50 per cent of the rural households and about 20 per cent of the urban had no *literate* among the female members of age 15 years and above.
- Among the major States, the proportion of households with no *literate* among the members of age 15 years and above was found to be the lowest in Kerala (3 per cent) and the highest in Bihar (38 per cent) in the rural areas. In the urban areas, it was found to be the lowest again in Kerala (1 per cent) and the highest in Rajasthan (16 per cent) followed by Bihar (15 per cent) and West Bengal (14 per cent).
- In India, the literacy rate was 64 per cent during 2004-05. The literacy rate was 55 per cent in the rural areas and 75 per cent in the urban areas. About 64 per cent of rural males and 45 per cent of rural females were literate. The literacy rates among their urban counterparts were much higher at 81 per cent and 69 per cent, respectively.
- In the rural areas of the major States, the literacy was the highest in Kerala (83 per cent) and the lowest in Bihar (44 per cent). On the other hand, in the urban areas of the major States, the literacy rate was the highest in Kerala (85 per cent) and the lowest in Rajasthan (64 per cent).
- The proportion of *non-literates* was found to be the highest in the bottom monthly per capita expenditure (MPCE) class and it decreased gradually as the MPCE increased.
- The proportion of the *educated* (i.e., those with level of general education *secondary and above including diploma/ certificate course*) was found to be the lowest in the bottom MPCE class in the urban areas and the same was the case in the two bottom MPCE classes in the rural areas.
- Among persons of age 15 years and above, only 2 per cent had technical degrees or diplomas or certificates. The proportion was only 1 per cent in the rural areas and 5 per cent in the urban.

- About 50 per cent of people in the age group 5-29 years were currently attending educational institution. It was a little higher for males (53 per cent) than for females (46 per cent).
- Among the major States, the current attendance rate for the age group 5-29 years was the highest in Himachal Pradesh (60 per cent) and the lowest in Orissa (42 per cent).
- Government institutions accounted for 63 per cent of all students (i.e., those who were currently attending), followed by private unaided institutions (17 per cent), private aided institutions (14 per cent) and local body institutions (only 6 per cent).
- Among males (5-29 years) who were currently not attending any educational institution, about 55 per cent reported the reason 'to supplement household income' for not attending. The reason 'to attend domestic chores' was reported by 30 per cent of females who were currently not attending any educational institution.
- Among persons of age 15-29 years, about 2 per cent reported to have received formal vocational training and another 8 per cent reported to have received nonformal vocational training.
- The proportion of persons (15-29 years) who received formal vocational training was the highest among the unemployed. The proportion was around 3 per cent for the employed, 11 per cent for the unemployed and 2 per cent for persons not in the labour force.
- Among the persons (15-29 years) who received formal vocational training, the most demanded field of training was 'computer trades' and around 31 per cent received such training.
- The Industrial Training Institutes (ITIs)/ Industrial Training Centres (ITCs) played a major role in providing formal vocational training. About 20 per cent received formal vocational training from ITIs/ITCs.

Chapter One

Introduction

1.1 The Report in Perspective

1.1.1 An all-India quinquennial survey of employment and unemployment in India was carried out during the period from July, 2004 to June, 2005 as a part of the 61st round of the National Sample Survey (NSS). In this survey, information on various facets of employment and unemployment in India and some characteristics associated with them at the national and state level was collected through the employment and unemployment schedule (Schedule 10). Information on some general particulars of the household members such as age, sex, level of general and technical education attained, current attendance in educational institutions, vocational training received, etc., was also collected in the survey. Based on the data collected on educational particulars of the individual household members, estimates pertaining to some broad features of literacy, attainment of general and technical education, current attendance in educational institutions, vocational training received, etc., among the people in India, have been presented in this report.

1.2 Background

- 1.2.1 The NSSO has been collecting comprehensive data on educational particulars of household members as a part of decennial surveys on social consumption. The first all-India survey on social consumption was carried out in the 35th round (July 1980 - June 1981). The subjects covered were the public distribution system, health services (including mass immunisation and family welfare programmes) and educational services. The results of the survey could not be brought out owing to some unavoidable reasons. The second survey on social consumption was carried out in the 42nd round (July 1986 - June 1987) with some modifications in the coverage of subjects, like the inclusion of the subject relating to the problems of aged persons. The third survey on social consumption was carried out in the 52nd round (July 1995 - June 1996) and in that survey, modules on utilisation of the public distribution system and utilisation of family planning services were dropped from the coverage. In between the second and the third surveys on social consumption, data on educational particulars of household members were collected in the 47th round survey (July – December, 1991). In that round, apart from the data collected on education from all the household members, a literacy test on reading and writing a simple sentence with understanding was conducted in the field itself to those literates whose educational level was found to be primary or below and age was 15 years or above. This was done to adjust the literacy rate on account of literates who lapsed into illiteracy. More over, a simple test on numeracy was given to measure functional literacy.
- 1.2.2 This apart, some information on educational particulars of the individual household members has been collected regularly along with the employment and unemployment data in all the quinquennial surveys of the NSSO. Data on vocational training was collected, for the first time, through the employment and unemployment schedule of the NSS 60th round.

1.2.3 *The present survey*: The report is based on the data of the educational particulars of the household members obtained from the seventh quinquennial survey on employment and unemployment conducted by the NSSO in the 61st round (July 2004 – June 2005). Prior to this survey, the six quinquennial surveys on employment and unemployment were conducted by NSSO in its 27th round (September 1972 - October 1973), 32nd round (July 1977 – June 1978), 38th round (January 1983 – December 1983), 43rd round (July 1987 – June 1988), 50th round (July 1993 – June 1994), and 55th round (July 1999 – June 2000). In the present survey, apart from the information on education usually collected in the quinquennial rounds, information on some new items such as (i) type of institution for those currently attending educational institutions, (ii) particulars on vocational training received/being received by the household members, etc., has been collected.

1.3 Scope

1.3.1 In the present survey, NSSO collected some data on educational particulars like educational level attained – both general and technical, current attendance in educational institution, type of institution, vocational training received/ being received, etc. from the household members. The highest level of education successfully completed by a person whether general education/technical education/ vocational training was considered to be the general level of education of the person. Information on current attendance in educational institutions was collected from persons of age below 30 years. For those who were currently attending educational institutions, information on type of institution was colleted. For those who were not currently attending any educational institution, information on whether they had ever attended in any educational institution was collected. Information on reason for not attending educational institution was collected from those who never attended any educational institution as well as from those who ever attended but were currently not attending any. From each person of age 15 to 29 years, information on formal and non-formal vocational training received and formal vocational training being received was collected. For the formal vocational training received/being received, information on field of training, duration of training, source from where degree/diploma/certificate was received/to be received was also collected.

1.4 The survey outline

1.4.1 The survey covered the whole of the Indian Union *except* (i) Leh (Ladakh) and Kargil districts of Jammu & Kashmir, (ii) interior villages of Nagaland situated beyond 5 kilometres of the nearest bus route and (iii) villages in Andaman and Nicobar Islands which remained inaccessible throughout the year. All the sample first stage units of the districts of Poonch and Rajouri of Jammu & Kashmir, all rural samples of the district of Doda of Jammu & Kashmir, and all rural samples of the district of Nicobar of Andaman and Nicobar Islands became a causality and therefore, these areas are outside the survey coverage. The fieldwork of the 61st round of the NSS started from 1st July, 2004 and continued till 30th June, 2005. As usual, the survey period of this round was divided into four sub-rounds, each with a duration of three months: the 1st sub-round period ranging from July to September 2004, the 2nd sub-round period from October to December 2004 and so on. An equal number of sample villages/blocks (FSUs) was allotted for survey in each of these four sub-rounds. The survey used the interview method of data collection from a sample of randomly selected households.

1.5 Sample design

- 1.5.1 In the 61st round survey, a stratified multi-stage sampling design was adopted for selection of the sample units for rural as well as urban areas. The first stage units (FSUs) were the census villages (panchayat wards for Kerala) for rural areas and the NSS Urban Frame Survey (UFS) blocks for urban areas. The ultimate stage units (USUs) were the households for both rural and urban areas. Hamlet-groups/sub-blocks constituted the intermediate stage whenever these were formed in the sample FSUs. For rural areas, the list of 2001 census villages constituted the sampling frame for selection of sample FSUs for most of the states. For the rural areas of Kerala, however, the list of panchayat wards was used as the sampling frame for selection of panchayat wards. For the urban areas, the latest lists of UFS blocks constituted the sampling frame for selection of sample FSUs. Within each district of a State/UT, two separate basic strata, viz., rural stratum and urban stratum, were formed. The rural stratum of a district comprised all the rural areas of the district and the urban stratum comprised all the urban areas of the district.
- 1.5.2 At the all-India level, a total number of 12,788 FSU's (8,128 villages and 4,660 urban blocks) was allocated for the survey and this was divided into different States and UTs in proportion to population as per the census of 2001 and between rural and urban sectors in proportion to population as per that census with 1.5 weightage to urban sector. Within each of the rural and urban sectors of a State/UT, the respective sample size was allocated to the different strata in proportion to the stratum population as per the census of 2001.
- 1.5.3 Within a district, if r number of FSUs were allocated for a rural stratum, a total number of r/2 sub-strata were formed within that rural stratum. From each sub-stratum of the rural stratum of a district, two FSUs were selected with probability proportional to size with replacement (PPSWR), size being the population as per the population census of 2001. Within a district, if u of FSUs were allocated for a urban stratum, a total of u/2 sub-strata were formed within that urban stratum. From each sub-stratum of the urban stratum of a district, two FSUs were selected with simple random sampling without replacement (SRSWOR). Within each sub-stratum, samples were drawn in the form of two independent sub-samples in both the rural and urban sectors. All households listed in the selected village/block/ hamlet-group/sub-block were stratified into three second stage strata (SSS). A total of 10 households were selected from each sample village/block for canvassing the employment and unemployment schedule. The sample households from each of the second stage strata were selected by SRSWOR.
- 1.5.4 Out of the total number of 12,788 FSU's (8,128 villages and 4,660 urban blocks) selected for survey for the central sample, 12601 FSUs (7,999 villages and 4,602 urban blocks) could be surveyed at the all-India level for canvassing Schedule 10. The number of households surveyed was 1,24,680 (79,306 in rural areas and 45,374 in urban areas) and number of persons surveyed was 6,02,833 (3,98,025 in rural areas and 2,04,808 in urban areas). The sample design and estimation procedure used for the survey are given in Appendix B of the report.

1.6. Contents of the Report

1.6.1 The present report discusses some broad features of literacy, attainment of general and technical education, current attendance in educational institutions, vocational training received, etc., among the people in India. This report contains three chapters, including the present introductory chapter, and three appendices. Chapter Two provides the details of the concepts and definitions of only those terms used in the survey in connection with various items covered in this report. Chapter Three discusses the main findings of the survey. The detailed all-India tables based on which this report is brought out are presented in Appendix A. Appendix B gives a fairly detailed description of the sample design and estimation procedure used for the survey, and Appendix C gives a facsimile of the schedule of enquiry canvassed in the field.

1.6.2 All the estimates presented in this report are based on Central sample data only. Further, the cell-level figures in any of the detailed tables, when added up, may not exactly be equal to the figure shown against the "total" column (or line) due to (i) rounding off and/or (ii) presence of non-response cases. It may be noted that the estimates of aggregates given in the detailed tables are meant to help combine the ratios. To arrive at the absolute number in any category, the survey estimates of ratios are to be applied to the projected populations as on 01.01.2005, the mid-point of the 61st round survey period (July 2004 to June 2005).

1.7 Plan for release of results

1.7.1 It has been planned to bring out a series of seven reports on the basis of the employment and unemployment survey results of NSS 61st round. The present report is the third in the series. The first report, viz. Report No. 515 (Employment and unemployment situation in India, 2004-2005) dealt, in some detail, with the employment-unemployment estimates at all-India and State/Union Territory level measured in terms of the three basic approaches of usual status, current weekly status and current daily status. The second report, viz. Report No. 516 (Employment and unemployment situation among social groups in India, 2004-2005) dealt with the employment-unemployment situation among the various social groups in the country, along with certain other features associated with them. The other four reports to be released relate to : (i) Informal Employment in India: 2004 - 05, (ii) Employment and Unemployment Situation in Cities and Towns in India: 2004 - 05, (iii) Participation of Women in Specified Activities along with Domestic Duties: 2004 - 05, (iv) Employment and Unemployment Situation among Major Religious Groups in India: 2004 - 05.

Chapter Two

Concepts and Definitions

- 2.0 The definitions of some important terms and concepts used in the survey and relevant to this report are presented in the following paragraphs.
- 2.1 Household: A group of persons who normally lived together and took food from a common kitchen constituted a household. The adverb "normally" means that temporary visitors and guests (whose total period of stay in the household was expected to be less than 6 months) were excluded but temporary stay-aways (whose total period of absence from the household was expected to be less than 6 months) were included. Thus a child residing in a hostel for studies was excluded from the household of his/her parents, but a resident domestic servant or a paying guest (but not just a tenant in the house) was included in the employer's/host's household. "Living together" was given more importance than "sharing food from a common kitchen" in drawing the boundaries of a household in case the two criteria were in conflict. However, in the special case of a person taking food with his family but sleeping elsewhere (say, in a shop or a different house) due to space shortage, the household formed by such a person's family members was taken to include the person also. Each inmate of a hotel, mess, boarding-lodging house, hostel, etc., was considered to be a single-member household except that a family living in a hotel (say) was considered one household only. The same principle was applicable for the residential staff of such establishments. The size of a household is the total number of persons in the household.
- 2.2 *Household type*: The household types were assigned on the basis of the sources of the household's income during the last 365 days preceding the date of survey. For this purpose, only the household's income from economic activities was considered. The income of servants and paying guests was not taken as the income of the household. Household types have been arranged as follows:

For the **rural** areas, household types were as follows:

```
self-employed in:
    agriculture (code - 4),
    non-agriculture (code - 1),
rural labour:
    agricultural labour (code - 2),
    other labour (code - 3),
residual other households (code - 9).
```

For **urban** areas, the household types were as follows:

```
self-employed (code - 1), regular wage/salary earning (code - 2), casual labour (code - 3), residual other households (code - 9).
```

2.2.1 **Procedure for assigning household type codes in rural sector**: For a **rural** household, if a single source (among the five sources of income listed in preceding paragraph) contributes 50% or more of the household's income from economic activities during the last 365 days, the type code (1, 2, 3, 4 or 9) corresponding to that source is assigned.

For a household to be classified as 'agricultural labour' or 'self-employed in agriculture' (code 2 or 4) its income from that source must be 50% or more of its total income. If there is no such source yielding 50% or more of the household's total income, code 1, 3 or 9 was given according to the following procedure.

To be classified as self-employed in non-agriculture (code 1), the household's income from that source must be greater than its income from rural labour (all wage-paid manual labour) as well as that from all other economic activities put together (a three-way division is to be considered here).

A household not getting code 1, 2 or 4 is to be classified as other labour (code 3) if its income from rural labour (all wage-paid manual labour) is greater than that from self-employment as well as that from other economic activities (again a three-way division). All other households will get type code 9.

For **urban** areas the different urban type codes correspond to four sources of household income, unlike the rural sector where five sources are considered. An urban household is to be assigned the type code 1, 2, 3 or 9 corresponding to the major source of its income from economic activities during the last 365 days. A household, which does not have any income from economic activities, is to get type code 9 (residual other households).

2.3 Household monthly per capita consumer expenditure (MPCE): For collection of data on total expenditure of the household from employment and unemployment schedule (Schedule 10), a worksheet was used in Schedule 10 of the 61st round. The approximate value of consumer expenditure obtained through the worksheet has been used for classifying employment and unemployment characteristics of household members by level of living of household as reflected in MPCE. The worksheet contained 36 different components of household consumer expenditure. Depending upon the type of item, either of the two reference periods, viz., 30 days and 365 days, was used to record consumption of different groups of items. The items of consumption were classified into four groups and three different approaches, viz (a) consumption approach, (b) expenditure approach and (c) first-use approach, were followed for defining consumption of items. The different groups were (i) food (other than 'cooked meals'), pan, tobacco & intoxicants and fuel & light, (ii) cooked meals, miscellaneous goods and services including education, medical, rent, taxes and cess, (iii) clothing and footwear and (iv) durable goods. The procedures followed for defining consumption of the four groups were (i) consumption approach, (ii) expenditure approach, (iii) first-use approach and (iv) expenditure approach, respectively.

- 2.4 General educational level: A person was considered literate if he/she could both read and write a simple message with understanding in at least one language. For all the individuals who were found to be literate, the level of general education was recorded in terms of highest level of education successfully completed. Highest level of education successfully completed by each member of the household was decided by considering his/ her all general/ technical/ vocational educational level and was recorded in terms of 12 categories viz. (i) not literate, (ii) literate without formal schooling: (a) EGS/NFEC/AEC, (b) TLC, (c) others; (iii) literate but below primary, (iv) middle, (v) secondary, (vi) higher secondary, (vii) diploma/certificate holder, (viii) graduate, and (ix) postgraduate and above. The criterian for deciding primary, middle, secondary, etc., levels were the same as those which have been followed in the concerned States/Union Territories. The category 'diploma or certificate course' meant diploma or certificate courses in general education, technical education or vocational education, which is below graduation level. Diploma or certificate courses in general education, technical education or vocational education, which was equivalent to graduation level, was considered under the category 'graduate'. Similarly, diploma or certificate courses in general education, technical education or vocational education, which was equivalent to post-graduation level and above were considered under the category 'post-graduate and above'.
- 2.5 **Technical educational level:** The highest level of technical education successfully completed by each member of the household was recorded in terms of 12 categories, viz. (i) no technical education, (ii) technical degree in agriculture / engineering / technology / medicine, etc., (iii) diploma or certificate below graduate level in: (a) agriculture, (b) engineering/technology, (c) medicine, (d) crafts, (e) other subjects, and (iv) diploma or certificate equivalent to graduate and above level in: (a) agriculture, (b) engineering/technology, (c) medicine, (d) crafts, (e) other subjects. Technical diploma or certificate in 'other subjects' included diploma or certificate in management, applied arts, etc.
- 2.6 Status of current attendance in educational institution: Particulars of current attendance in educational institution were recoded for persons of age below 30 years. It was first ascertained whether the person was currently attending any educational institution (government or private) or not. Persons who were not currently attending any educational institutions, reason for not attending, viz. (1) school too far, (2)had to supplement household income, (3) education not considered necessary, (4) had to attend domestic chores, and (5) others, was recorded. For those who were currently attending any educational institutions, the courses of study pursued by them was recorded in terms of 20 categories, viz. (i) EGS/NFEC/AEC, (ii) TLC, (iii) pre-primary (nursery/Kinder garten, etc.), (iv) primary (class I to IV/V), (v) middle, (vi) secondary and higher secondary, (vii) graduate and above in: (a) agriculture, (b) engineering/technology, (c) medicine, (d) other subjects, (viii) diploma or certificate (below graduate level) in: (a) agriculture, (b) engineering/technology, (c) medicine, (d) crafts, (e) other subjects, (ix) (graduate and above level) in: (a) agriculture, (b) diploma or certificate engineering/technology, (c) medicine, (d) crafts, (e) other subjects. Persons who were registered for any regular correspondence courses or distance education courses for a stipulated period at the end of which, would be allowed to appear in the examination for the course, was also considered to be 'currently attending'. Persons who were awaiting results were also considered to be 'currently attending'.

- 2.7 **Type of institution:** The type of institution referred to the type of management by which the institution was run. For those who were currently attending any educational institution, the type of institution was recorded in terms of 5 categories, viz. (i) Government, (ii) Local body, (iii) Private aided, (iv) Private unaided, and (v) not known. All schools/ institutions run by the State Governments, Central Government, Public Sector Undertakings or Autonomous Organisations, which were completely financed by the Government were treated as government institutions. Schools/ institutions where there was some intervention of Government in the management and were mainly financed by the government, were also treated as Government institutions. All institutions run by municipal corporations, municipal committees, notified area committees, zilla parishads, panchayat samitis, cantonment boards, etc., were treated as local body institutions. Institutions that were run by an individual or a private organisation and received maintenance grants partly or fully from the Government or local body were considered to be private aided institutions. Institutions that were managed by an individual or a private organisation and not receiving maintenance grants either from a Government or a local body were considered to be private unaided institution.
- 2.8 *Vocational training*: The main objective of vocational education and training is to prepare persons, especially the youth, for working life and make them employable for a broad range of occupations in various industries and other economic sectors. A vocational training was broadly defined as a training, which prepared an individual for a specific vocation or occupation. It aims at imparting training to persons in very specific fields through providing significant 'hands on' experience in acquiring necessary skill in the specific vocation or trade, which make them employable or create for them opportunities of self-employment. In the 61st round survey on employment and unemployment, information on formal vocational training being received and formal/non-formal vocational training already received was collected from each person of age 15 to 29 years. For the formal vocational training, source from where degree/diploma/certificate was received/was to be received was also collected.
- 2.8.1 *Formal vocational training*: The vocational training that took place in education and training institutions which followed a structured training programme and led to certificates, diplomas or degrees, recognised by State/Central Government, Public Sector and other reputed concerns was considered to be formal vocational training. By a structured training programme, it was meant that (i) the training programme had a definite title with prescribed syllabus and curriculum and a specified duration of the training, and (ii) the training had some entry-level eligibility in terms of education and age.
- 2.8.2 *Non-formal vocational training*: The expertise in a vocation or trade is sometimes acquired by the succeeding generations from the other members of the households, generally the ancestors, through gradual exposures to such works. The expertise gained through significant 'hands-on' experience enables the individual to take up activities in self-employment capacity or makes him employable. Acquiring such marketable expertise by one, which enabled him/her to carry out the trade or occupation of his/her ancestors over generations, was considered as receiving 'non-formal' vocational training through 'hereditary' sources. 'Non-formal' vocational training received by a person to pursue a vocation different from the trade or occupation of his/her ancestors, was considered to be 'non-formal' vocational training through 'other' sources. The 'other' sources also included

the cases where the expertise to carry out the trade or occupation of one's ancestors was acquired from sources other than the household members.

- 2.9 **Economic activity**: The entire spectrum of human activity falls into two categories economic activities and non-economic activities. Any activity resulting in production of goods and services that add value to national product was considered an economic activity for the employment and unemployment survey of the NSS 61st round. Such activities included production of all goods and services for market (i.e. for pay or profit) including those of government services, and, the production of primary commodities for own consumption and own account production of fixed assets.
- 2.9.1 The full spectrum of economic activities as defined in the UN system of National Accounts (1993) was not covered in the definition adopted for the NSS 61st round survey of Employment and Unemployment. Production of any good for own consumption is considered to be economic activity by the UN System of National Accounts but production of only primary goods for own consumption was considered to be economic activity by the NSSO. While the former considers activities like own account processing of primary products as economic activities, in the NSS surveys, processing of primary products for own consumption was not considered to be economic activity.
- 2.9.2 The term 'economic activity' as defined by the employment and unemployment survey of the NSS 61st round, therefore, included:
 - (i) all the market activities performed for pay or profit which resulted in production of goods and services for exchange.
 - (ii) of the non-market activities,
 - (a) all the activities relating to the primary sector (i.e. industry Divisions 01 to 14 of NIC-98) which resulted in production (including free collection of uncultivated crops, forestry, firewood, hunting, fishing, mining, quarrying, etc.) of primary goods for own consumption

and

(b) the activities relating to the own-account production of fixed assets. Own - account production of fixed assets included construction of own houses, roads, wells, etc., and of machinery, tools, etc., for household enterprise and also construction of any private or community facilities free of charge. A person may have been engaged in own account construction in the capacity of either a labour or a supervisor.

As per the practice followed in earlier rounds, certain activities like prostitution, begging, etc., which though fetched earnings, were not considered economic activities. Activity status of a person was judged irrespective of whether such activity was carried out illegally in the form of smuggling or not.

2.10 *Activity status*: It is the activity situation in which a person was found during a reference period with regard to the person's participation in economic and non-economic activities. According to this, a person could be in one or a combination of the following three broad activity statuses during a reference period:

- (i) working or being engaged in economic activity (work) as defined above,
- (ii) being not engaged in economic activity (work) but either making tangible efforts to seek 'work' or being available for 'work' and
- (iii) being not engaged in any economic activity (work) and also not available for 'work'.

Broad activity statuses mentioned in (i) and (ii) above are associated with 'being in labour force' and the last with 'not being in the labour force'. Within the labour force, broad activity statuses (i) and (ii) were associated with 'employment' and 'unemployment', respectively. Each of the three broad activity statuses was further sub-divided into several detailed activity categories.

- 2.11 **Different approaches followed to determine activity status**: The persons surveyed were classified into various activity categories on the basis of the activities pursued by them during certain specified reference periods. There were three reference periods for this survey. These were: (i) one year (ii) one week and (iii) each day of the reference week. Based on these three periods, three different measures of activity status were arrived at. These were termed respectively as usual status, current weekly status and current daily status. In this report, usual status approach has been followed for identification of different activity statuses. The concepts of different activity statuses are elaborated in this chapter with respect to the usual status approach only.
- 2.11.1 Usual principal activity status: The usual activity status relates to the activity status of a person during the reference period of 365 days preceding the date of survey. The activity status on which a person spent relatively longer time (i.e. major time criterion) during the 365 days preceding the date of survey was considered the usual principal activity status of the person. To decide the usual principal activity of a person, first a two-stage dichotomous classification was followed for determining the broad usual principal activity status of the person viz., (i) employed, (ii) unemployed, and (iii) not in labour force. Persons were first categorised as those in the labour force and those not in the labour force depending on the major time spent during the 365 days preceding the date of survey. Persons thus adjudged as not belonging to the labour force were assigned the broad activity status 'neither working nor available for work' (not in the labour force). For persons belonging to the labour force, the broad activity status of either 'working' (employed) or 'not working but seeking and/or available for work' (unemployed) was ascertained based on the same criterion, viz. relatively longer time spent in accordance with either of the two broad statuses within the labour force during the 365 days preceding the date of survey. Within the broad activity status so determined, the detailed activity status of a person pursuing more than one such activity was determined once again on the basis of the relatively longer time spent on such activities. Regarding activity status codes (stated earlier in para 2.11.1), codes 11-51 were applicable for persons classified as workers, code 81 for persons seeking or available for work (unemployed persons) and codes 91-97 for persons who were not in the labour force.
- 2.11.2 *Usual subsidiary economic activity status*: A person whose usual principal status was determined on the basis of the major time criterion might have pursued some economic activity for a shorter time throughout the reference year of 365 days preceding

the date of survey or for a minor period, which was not less than 30 days, during the reference year. The status in which such economic activity was pursued was the subsidiary economic activity status of that person. Activity status codes 11-51 only were applicable for the subsidiary economic activity performed by a person. It may be noted that engagement in work in subsidiary capacity may arise out of the two following situations:

- (i) A person may have been engaged in a relatively longer period during the 365 days in economic (non-economic activity) and for a relatively minor period, which was not less than 30 days (not necessarily for a continuous period), in another economic activity (any economic activity). The economic activity, which was pursued for a relatively minor period, was considered to be his/her subsidiary economic activity.
- (ii) A person may have been pursuing an economic activity (non-economic activity) almost throughout the year in the principal status and also simultaneously pursuing another economic activity (any economic activity) for a relatively shorter time in a subsidiary capacity. The economic activity, which was pursued for a relatively shorter time, was considered to be his/her subsidiary economic activity.
- 2.11.3 Usual activity status considering principal and subsidiary statuses taken together: The usual status, determined on the basis of the usual principal activity and usual subsidiary economic activity of a person taken together, was considered to be the usual activity status of the person and was written as usual status (ps+ss). According to the usual status (ps+ss), workers were those who performed some work activity either in the principal status or in the subsidiary status. Thus, a person who was not a worker in the usual principal status was considered a worker according to the usual status (ps+ss), if the person pursued some subsidiary economic activity for 30 days or more during 365 days preceding the date of survey.
- 2.12 Activity categories according to the usual status approach: The detailed activity statuses under each of the three broad activity statuses (viz. employed, unemployed and not in labour force) and the corresponding codes used in the survey for the usual status approach are given below:

<u>code</u> <u>description</u>

working (or employed)

- worked (self-employed) in household enterprises as own-account worker
- worked (self-employed) in household enterprises as an employer
- worked (self-employed) in household enterprises as helper
- worked as regular salaried/wage employee
- 41 worked as casual wage labourer in public works
- worked as casual wage labourer in other types of work

not working but seeking/available for work (or unemployed)

sought work or did not seek but was available for work

neither working nor available for work (or not in labour force)

- 91 attended educational institution
- 92 attended to domestic duties only
- attended to domestic duties and was also engaged in free collection of goods (vegetables, roots, firewood, cattle feed, etc.), sewing, tailoring, weaving, etc., for household use
- 94 rentier, pensioner, remittance recipient, etc.
- 95 not able to work owing to disability
- other (such as beggar, prostitute, etc.)
- 99 child of age 0-4 years
- 2.13 Workers (or employed): Persons who were engaged in any economic activity or who, despite their attachment to economic activity, abstained from work owing to illness, injury or other physical disability, bad weather, festivals, social or religious functions or other contingencies necessitating temporary absence from work, constituted workers. Unpaid helpers who assisted in the operation of an economic activity in the household farm or a non-farm activity were also considered to be workers. Relevant activity status codes from11 to 51 were assigned for workers. Workers were further categorized as self-employed (codes: 11, 12, 21), regular salaried/wage employees (code: 31), and casual wage labour (codes: 41 and 51).
- 2.14 **Seeking or available for work (or unemployed)**: Persons, who owing to lack of work, did not work but either sought work through employment exchanges, intermediaries, friends or relatives or by making applications to prospective employers or expressed their willingness or availability for work under the prevailing conditions of work and remuneration, were considered to be those who were 'seeking or available for work' (or were unemployed). Activity status code 81 was assigned to the unemployed.
- 2.15 *Labour force*: Persons who were either 'working' (or employed) or 'seeking or available for work' (or unemployed) constituted the labour force. Persons with activity status codes 11 81 formed the labour force.

- 2.16 *Not in labour force*: Persons who were neither 'working' nor 'seeking or available for work' for various reasons during the reference period were considered to be 'not in labour force'. Persons under this category were students, those engaged in domestic duties, rentiers, pensioners, recipients of remittances, those living on alms, infirm or disabled persons, too young persons, prostitutes, etc. and casual labourers not working owing to sickness. Activity status codes 91-95, 97 and 99 were assigned to persons belonging to the category 'not in labour force'.
- 2.17 **Self-employed**: Persons who operated their own farm or non-farm enterprises or were engaged independently in a profession or trade on own-account or with one or a few partners were deemed to be self-employed in household enterprises. The essential feature of the self-employed is that they have *autonomy* (i.e., how, where and when to produce) and *economic independence* (i.e., market, scale of operation and money) for carrying out their operation. The remuneration of the self-employed is often described as mixed-income because it consists of a non-separable combination of two parts: a reward for their labour and profit of their enterprise. The combined remuneration is wholly determined by the sales of output produced by self-employed persons.
- 2.17.1 Categories of self-employed persons: Self-employed persons were categorised as follows:
 - (i) **Own-account workers**: Those self-employed persons who operated their enterprises on their own account or with one or a few partners and who, during the reference period, by and large, ran their enterprises without hiring any labour. They might, however, have had unpaid helpers to assist them in the activity of the enterprises.
 - (ii) *Employers*: Those self-employed persons who worked on their own account or with one or a few partners and, who, by and large, ran their enterprise by hiring labour.
 - (iii) *Helpers in household enterprise*: Those self-employed persons (mostly family members) who were engaged in their household enterprises, working full or part time and did not receive any regular salary or wages in return for the work performed. They did not run the household enterprises on their own but assisted the related persons living in the same households in running the household enterprises.
- 2.18 **Regular salaried/wage employee**: These were persons who worked in others' farm or non-farm enterprises (both household and non-household) and, in return, received salary or wages on a regular basis (i.e. not on the basis of daily or periodic renewal of work contract). This category included not only persons getting time wages but also persons receiving piece wages or salary and paid apprentices, both full -time and part-time.
- 2.19 *Casual wage labourer*: A person who was casually engaged in others' farm or nonfarm enterprises (both household and non-household) and, in return, received wages according to the terms of the daily or periodic work contract, was a casual wage labourer.
- 2.20 *Industry and occupation of the work activity*: For the employed persons, to record the industry of work, the 5-digit classification of NIC-1998 was used and to record the type of occupation, the 3-digit classification of NCO-1968 was used. In case two or more

industry-occupation combinations corresponding to the status code were reported by a person, the industry-occupation was taken as the one in which *relatively more time* was spent during the reference period by the person. To identify certain category of workers under Division 95 (Private households with employed persons) of NIC 1998, six additional codes were used in the survey viz., housemaid /servant (95001), cook (95002), gardener (95003), gatekeeper/chowkidar/watchman (95004), governess/baby-sitter (95005) and 'others' (95009). This apart, separate industry codes were used for recording the activities of letting of building for residential purposes (70104) and letting of building for non-residential purposes (70105).

2.21 *Manual work*: A job essentially involving physical labour was considered to be manual work. However, jobs essentially involving physical labour but also requiring a certain level of general, professional, scientific or technical education were not termed as 'manual work'. On the other hand, jobs not involving much of physical labour and at the same time not requiring much educational (general, scientific, technical or otherwise) background were treated as 'manual work'. Thus, engineers, doctors, dentists, midwives, etc., were not considered manual workers even though their jobs involved some amount of physical labour. But, peons, chowkidars, watchman, etc., were considered manual workers even though their work might not involve much physical labour. Manual work was defined as work pursued in one or more of the following occupational groups of the National Classification of Occupations (NCO 1968)*:

Division 5 (Service workers):

Group 52: cooks, waiters, bartenders and related workers (domestic and institutional)

Group 53: maid and other housekeeping service workers (not elsewhere classified)

Group 54: building caretakers, sweepers, cleaners and related workers

Group 55: launderers, dry cleaners and pressers

Group 56: hair dressers, barbers, beauticians and related workers

Family 570: fire fighters

Family 574: watchmen, gate-keepers

Family 579: protective service workers not elsewhere classified.

Division 6 (Farmers, Fishermen, Hunters, Loggers and related workers):

Group 63: agricultural labourers

Group 64: plantation labourers and related workers

Group 65: other farm workers

_

^{*} In NCO-68, the single-digit codes are termed as "Division", two-digit codes as "Group" and three-digit codes as 'Family".

Group 66: forestry workers

Group 67: hunters and related workers

Group 68: fishermen and related workers

Division 7-8-9 (Production and related workers, transport equipment operators and labourers):

All groups excluding group 85 (electrical fitters and related workers) and group 86 (broadcasting station and sound equipment operators and cinema projectionists).

- 2.22 *Rural labour*: manual labourer working in agricultural and /or non-agricultural occupations *in return for wages* paid either in cash or in kind (excluding exchange labour) and *living in rural areas*, was taken as a rural labourer.
- 2.23 *Agricultural labour*: A person was considered as engaged as agricultural labour, if he/she followed one or more of the following agricultural occupations in the capacity of a wage-paid manual labourer, whether paid in cash or kind or both:
 - (i) farming,
 - (ii) dairy farming,
 - (iii) production of any horticultural commodity,
 - (iv) raising of livestock, bees or poultry,
 - (v) any practice performed on a farm as incidental to or in conjunction with farm operations (including forestry and timbering) and the preparation for market and delivery to storage or to market or to carriage for transportation to market of farm produce.

Working in fisheries was *excluded* from agricultural labour. Further, 'carriage for transportation' referred *only to the first stage of the transport* from farm to the first place of disposal.

2.24 *Wage- paid manual labour*: A person who did manual work in return for wages in cash or kind or partly in cash and partly in kind (excluding exchange labour) was considered as a wage paid manual labour. Salaries were also counted as wages. A person who was self-employed in manual work was *not treated* as a wage- paid manual labourer.

Chapter Three

Summary of Findings

3.0. Introduction

3.0.1 General: The NSS 61st round was conducted during July 2004 and June 2005. Apart from general classifying characteristics like age, sex, rural/urban location associated with the employment situation used in the previous quinquennial surveys, in this round, information on educational level attained -- both general and technical, current attendance status in educational institutions, formal or informal vocational training already received or being received, the field of training as well as institutions imparting it was also collected for each member of surveyed household in age-group 5-29 years of age. On this basis, this Chapter presents the main findings regarding the status of education and vocational training in India. The estimates are given for India and its constituent states and union territories with rural-urban break-up with an effort to present a more detailed picture at the all-India level. Discussions are mainly centered on the all-India estimates and to some extent on the major states. A comparison with results from the earlier surveys is also given at all-India level whenever it is available. The major results of the NSS 61st round on employment and unemployment based on schedule 10 have been presented in the Report No. 515 (Employment and Unemployment Situation in India: 2004-05). Salient general results of this report are repeated in this chapter to provide a perspective.

3.0.2 The scheme of presentation of this chapter is as follows. As an overview, estimates of households and population and their rural-urban composition by sex is given in Section 1. Details regarding literacy and general as well as technical education appear in Section 2. Section 3 presents estimates of current attendance in educational institutions, type of institution and reasons for not currently attending educational institutions in respect of age-group 5–29 years. The last Section 4 is devoted to a discussion of vocational training already received or being received, formal vocational training by broad activity status, field of formal vocational education and institutions imparting it.

3.0.3 Use of estimated aggregates: A few remarks on some general aspects of the survey are relevant as a backdrop for interpreting the results. All estimates presented in this report are based on the central sample only, that is, data relating to the samples collected by NSSO. It has been observed that compared to the census population or the projections thereof, population estimates from the NSSO surveys are, in general, on lower side. This difference may arise mainly due to the differences in methods and coverage adopted by the NSSO in comparison with the census operation. However, ratios obtained from the survey are expected to be reasonably reliable. Usually the estimates on literacy, level of education, etc. are presented in the form of ratios. To estimate an absolute number in any category, it is advisable to apply the survey estimates of ratios to the census population or projections thereof, for that category. The estimates of aggregates given in the detailed tables in the Appendix A are to be used as weights to help combine ratios and should not be used as estimates of absolute numbers for a given characteristic. It may also be noted that as the tables are generally presented as per thousand distributions, the figures are rounded off. Thus, while using the ratios from the survey results, it is to be noted that the

accuracy of these derived aggregates will be limited to the number of significant digits available in the ratio or percentage estimates presented in the report. The estimated aggregates, wherever possible, can be used to get ratios with more significant digits. The estimates presented in the report, in general, refer to the mid-point of the survey period (July 2004 to June 2005) of the 61st round, namely 01.01.2005.

3.0.4 Major States: The discussions in the summary findings have mostly been restricted to estimates of the major states though the all-India estimates are based on the data of all the states and union territories. While all-India summary results are presented along with the write-up, the corresponding results at the state/union territory level are given at the end of this chapter. It may be noted that the estimates given for smaller states and union territories may not be reliable due to small sample size. The major states are those with population one crore or more as per population census 2001 in respect of rural or urban sector separately. There are 20 major states in the rural areas and 21 major states in the urban areas. The major states are: Andhra Pradesh, Assam, Bihar, Chhattisgarh, Gujarat, Haryana, Himachal Pradesh, Jammu & Kashmir, Jharkhand, Karnataka, Kerala, Madhya Pradesh, Maharashtra, Orissa, Punjab, Rajasthan, Tamil Nadu, Uttar Pradesh, Uttaranchal, West Bengal and urban Delhi.

3.1 Estimates of Households and Population

- 3.1.1 As per the survey estimates, about 972 million people stayed in 207 million households in India. A little over 73 per cent of the households belonged to rural India and accounted for nearly 75 per cent of the total population.
- 3.1.2 The average household size for the rural areas was 4.8, which was a little higher than the urban average of 4.3. The sex ratio of an Indian household, on an average, was 951 during 2004-05. For every 1000 males, the number of females was more in the rural areas (962) compared to the urban areas (920).

3.1.3 Monthly Per Capita Consumer Expenditure (MPCE)

3.1.3.1 Household income, or for that matter 'level of living', is highly related with the literacy among the members of the household. Thus, the distribution of households and population by income level is an useful background information for a correlative study on literacy. As it is difficult to collect reliable income data, the NSSO collects data on consumption expenditure in its surveys. In the present survey on employmentunemployment, data on consumption expenditure was collected through a separate worksheet which was integrated with the employment-unemployment schedule (see Appendix C). Based on the data, monthly per capita consumer expenditure (MPCE) was worked out for each sample household, which is expected to serve as reasonable proxy for income. It may be added that the MPCE estimates based on the abridged worksheet are known to generally understate the level of MPCE in relation to that derived from the detailed schedule (Schedule 1.0) used in the consumer expenditure survey that was canvassed on an independent sample of households in the 61st round. It may be noted that the classintervals of MPCE used in the following statements are derived from the results of the detailed Schedule 1.0. The class limits of MPCE classes were determined, separately for the rural and urban sectors of all-India, in such a manner that each of the first two and last two classes contained 5% of the population and each of the remaining classes contained 10%. This may be borne in mind while interpreting the results. The distributions of households and the corresponding population by MPCE class for all-India are presented in Statement 3.1. The corresponding distributions for States and Union Territories are available in NSS Report 515 (Employment and Unemployment Situation in India:2004-05) and therefore, are not presented here.

3.1.3.2 In urban India, about 42 per cent of the households – which accounted for nearly 51 per cent of the population – spent less than Rs. 790/- per month per person. On the other hand, in rural India, about 41 per cent of the households – which accounted for 47 per cent of the population – could spend up to Rs.455/- per month per person. The proportion of households with per capita spending Rs.890/- or more was as low as 13 per cent in rural India. Compared to this, in urban India, about 48 per cent of households was spending Rs.930/- or more per month per person.

Statement 3.1: Per 1000 distribution of households and population by MPCE (Rs.) class during 2004-05

| | | | | | all-India |
|---------------|------------|------------|---------------|------------|------------|
| | rural | | | urban | |
| MPCE class | households | population | MPCE class | households | population |
| (1) | (2) | (3) | (4) | (5) | (6) |
| less than 235 | 29 | 34 | less than 335 | 33 | 44 |

| all classes | 1000 | 1000 | all classes | 1000 | 1000 |

3.1.4 Household Type

3.1.4.1 The nature and type of work from which a household derives its major income is an important indicator of the activity pattern of its members and in turn, of the level of education. In the survey, every sample household was, therefore, classified into household types based on the major source of income from all earning members of household during the preceding 365 days. The distribution of households and the corresponding population by *household type* is given in Statement 3.2 for all-India. The corresponding results for the States and Union Territories are available in NSS Report No. 515.

Statement 3.2: Per 1000 distribution of households and population by household type during 2004-05

| | | all-India |

| all | 1000 | 1000 |

3.1.4.2 Statement 3.2 reveals that during 2004-05, nearly 57 per cent of the rural population belonged the to households that were engaged selfin employment. Another 35 per cent of the rural population belonged to rural labour households. Among urban households, regular employment was mainstay of households that covered about 40 per cent of the urban population. Nearly 43 per cent of urban population was located in households that earned income mainly from selfemployment.

3.1.5 Age Distribution of Population

- 3.1.5.1 The background of the distribution of population by age and sex is useful for understanding the age-specific literacy rates and other educational indicators. In Statement 3.3, the distributions of the rural and urban population by 5-year age groups are presented for males and females separately. Comparable results based on the 50th round (1993-94) and 55th round (1999-2000) surveys are also presented in this statement.
- 3.1.5.2 Age distributions: During the five years separating the present survey from the last quinquennial one, a small shift is visible in the population, especially among the younger groups. A decline in the share of the youngest age-group (0-4 years) as well as of the children aged 5-14 years are noticeable in all the categories in both the rural and urban areas. The corresponding distributions for different States and Union Territories, though available in NSS Report No. 515, are given in Statement 3.3.1 for each sex separately for rural and urban areas at the end of this chapter.

Statement 3.3: Per 1000 distribution of population by five-year age groups in NSS 50th (1993-94) 55th (1999-2000) and 61st (2004-05) rounds

3.2 Literacy and Educational Level in the Population

3.2.1 Literacy among Household Members

3.2.1.1 For the purposes of this survey, a person who could read and write a simple message in any language with understanding was considered a *literate*. It may be mentioned that in the earlier quinquennial surveys prior to the 50th round, a person who could read and write a simple message in any language was considered *literate*. From the 55th round onwards, another condition, viz. reading and writing, 'with understanding' was added for identifying *literates*. In the survey, *literates* were further classified according to

their levels of educational attainment. Two indicators of extreme educational deprivation are presented in Statement 3.4, namely (a) households with no literate member aged 15 years and above; and in view of the critical role female literacy in demographic transition, (b) households with no literate female member of age 15 years and older. The corresponding estimates obtained from the earlier surveys of 1993-94 and 1999-2000 are also presented side by side to show the changes over time.

3.2.1.2 Statement 3.4 shows that, during 2004-05, in India, in as many as 26 per cent of households in the rural areas and 8 per cent in the urban areas, there was not a single

Statement 3.4: Number of households with no literate member/ female member of age 15 years and above per 1000 households during 1993-94, 1999-2000, 2004-05

member in the agegroup 15 years and above who could read and write a simple message with understanding. other words, all the adult members those households were illiterate. Further, as high as 50 per cent of the rural and 20 per cent of the urban households had no literate female member. Over the period of 11 years, there has

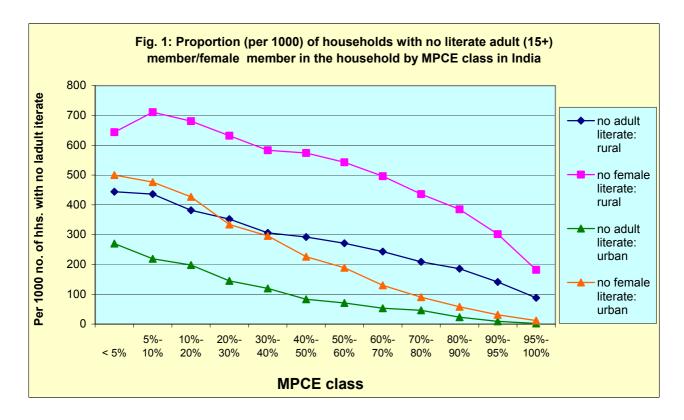

considerable progress in alleviating these extreme forms of educational deprivation. The results for the states and union territories are given in NSS Report No. 515. In the rural areas, 63 per cent of the households had at least one literate member of age 15 years and above in 1993-94; the proportion increased to 68 per cent in 1999-2000 and to 74 per cent in 2004 - 05. The corresponding proportions were about 86 per cent, 88 per cent and 92 per cent, respectively, in the urban areas.

3.2.2 Literacy among Household Members and MPCE

3.2.2.1 The proportion of households with no *literate* among the adult members is given in Statement 3.5 for each monthly per capita consumer expenditure (MPCE) class for India. The corresponding proportions for the States and Union Territories are presented in Statement 3.5.1. Figure 1 gives the proportion (per 1000) of households with no literate adult (age 15+) member/ female member in the household by MPCE class in India.

Statement 3.5: Number of households with no literate member/ female member of age 15 years and above per 1000 households among (a) all members and (b) female members for each MPCE class during 2004-05

| | | | | | all-India |

| less than 235 | 444 | 644 | less than 335 | 270 | 500 |
| 235 - 270 | 436 | 711 | 335 - 395 | 219 | 476 |
| 270 - 320 | 382 | 681 | 395 - 485 | 198 | 427 |
| 320 - 365 | 352 | 632 | 485 - 580 | 145 | 334 |
| 365 - 410 | 306 | 583 | 580 - 675 | 120 | 296 |
| 410 - 455 | 292 | 574 | 675 - 790 | 83 | 226 |
| 455 - 510 | 271 | 543 | 790 - 930 | 71 | 189 |
| 510 - 580 | 243 | 496 | 930 - 1100 | 53 | 130 |
| 580 - 690 | 209 | 436 | 1100 - 1380 | 46 | 90 |
| 690 - 890 | 186 | 385 | 1380 - 1880 | 23 | 58 |
| 890 -1155 | 141 | 302 | 1880 - 2540 | 9 | 31 |
| 1155 & above | 88 | 182 | 2540 & above | 2 | 12 |
| all classes | 261 | 500 | all classes | 84 | 195 |

3.2.2.2 As expected, the proportion of households with no *literate* among the adult members is observed to be higher in the lower MPCE classes and gradually decreases with increase in MPCE. For instance, about 44 per cent of the households belonging to the bottom MPCE class (i.e., MPCE below Rs. 235), in the rural areas, did not have any

literate among their adult members. This proportion for the top MPCE class (i.e., MPCE more than or equal to Rs. 1155) was only 9 per cent. In the urban areas, the proportion for the bottom MPCE class (i.e., MPCE below Rs. 335) was 27 per cent and for the top MPCE class (i.e., MPCE more than or equal to Rs. 2540) was almost nil.

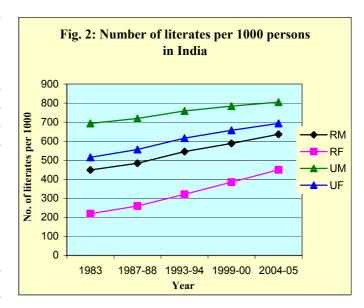

3.2.2.3 State results: All the States and Union Territories also reveal similar trend, as observed for all-India, in its rural and urban areas. Among the major States, the proportion of households with no *literate* among the adult members is found to be the lowest in Kerala (3 per cent) and the highest in Bihar (38 per cent) in the rural areas. In the urban areas, it is found to be the lowest again in Kerala (1 per cent) and the highest in Rajasthan (16 per cent) followed by Bihar (15 per cent) and West Bengal (14 per cent).

3.2.3 Literacy Rate in the Population

- 3.2.3.1 As mentioned earlier, a person who could read and write a simple message in any language with understanding was considered a *literate*. The literacy rates obtained from the 38th (1983), 43rd (1987 88), 50th (1993 94), 55th (1999 00) and 61st (2004 05) round surveys are presented in Statement 3.6 separately for the rural and urban sectors of all-India. The literacy rate is found to be higher in the urban areas than in the rural areas, and higher among males than among the females. In India, the overall literacy rate was 64 per cent during 2004-05, and it was 55 per cent in the rural areas and 75 per cent in the urban areas. About 64 per cent of rural males and 45 per cent of rural females were literate. The literacy rates among their urban counterparts were much higher at 81 per cent and 69 per cent, respectively. Moreover, the literacy rate increased steadily over the years for all the categories of persons. Over a period of around 22 years since 1983, the literacy rate increased by 19 percentage points from 45 per cent for rural males, 23 percentage points from 22 per cent for rural females, 12 percentage points from 69 per cent for urban males, and by 17 percentage points from 52 per cent for urban females. Figure 2 presents the literacy rate per 1000 persons in India.
- 3.2.3.2 State results: As seen from Statement 3.6.1, there was a considerable variation in the proportion of *literates* over the major States. In the rural areas of the major States, it varied from 44 per cent in Bihar to 83 per cent in Kerala. The States that were in the race with Kerala in the literacy rate were Himachal Pradesh (72 per cent) and Assam (70 per cent). Bihar was followed by Rajasthan (45 per cent), Jharkhand and Uttar Pradesh (47 per cent each) and Andhra Pradesh (48 per cent) in the rural areas. On the other hand, in the urban area of the major States, the literacy rate was highest in Kerala (86 per cent) followed by Assam (82 per cent) and the rate was lowest in Rajasthan (64 per cent) followed by Bihar (68 per cent) and Andhra Pradesh (70 per cent).

| | | | |

Note: Figures within the parentheses give the literacy rates obtained on the basis of data collected through Sch. 1.0, NSS 61st round.

for the rural and urban sectors of all-India. It may be noted that in the schedule on consumer expenditure (Sch. 1.0) canvassed in this round, data on age, sex, educational level attainment and some other socio-economic characteristics of each of the selected member households were collected from a separate set of sample households in the selected villages and urban blocks. Based on the data collected in the schedule on consumer expenditure. alternative estimate of literacy rate has

been obtained for persons 7 years and above and is presented in Statement 3.7 also. A close convergence is observed between the two sets of estimates of literacy rate obtained from the two different schedules, viz., Schedules 10 and 1.0. About 67 per cent among persons of age 7 years and above were literate in India during 2004-05. The rural-urban difference in the literacy rate was quite significant. The proportion was 62 per cent in the rural areas and 83 per cent in the urban areas. As usual, the rate is found to be higher among the males (77 per cent) than that among the females (57 per cent).

^{*:} For persons of age 0 years and above.

3.2.4 Literates and the Educational Level

3.2.4.1 In the survey, the general educational level of the household members was determined considering the highest level of education successfully completed: general, technical and vocational education & training. The level of general education included below primary, primary, middle, secondary, higher secondary, graduation and above, etc., Note that in the 61st round survey, the general educational level was recorded as 'diploma/ certificate' for those who completed a diploma or certificate course in general/technical education/vocational training provided that was below graduation level. Note that in the 61st round survey, general educational level was recorded as 'diploma/ certificate' for those who completed diploma or certificate course that was below graduation level. Diploma/ certificate courses, which were of graduation level or above, were classified under the respective class of general education. In the earlier surveys, such people were classified against the equivalent level of general education. Statement 3.8 presents the distribution of the literates of age 15 years and above by level of general education separately for each sex and sector at the all-India level. Literates with general educational level secondary and above including diploma/ certificate course have been considered to be *educated*.

Statement 3.8: Per 1000 distribution of literates of age15 years and above by general educational level during 2004-05

| | | | | | | al | l-India |
|-------------|------------|--------|-----------|-----------|--------------|----------|---------|
| category of | literate & | middle | secon- | higher | diploma/ | graduate | all |
| persons | up to | | dary | secondary | certi-ficate | & above | |
| | primary | | | | | | |
| (1) | (2) | (3) | (4) | (5) | (6) | (7) | (8) |
| | | | rural | | | | |
| male | 408 | 281 | 158 | 81 | 15 | 56 | 1000 |
| female | 480 | 274 | 138 | 66 | 11 | 31 | 1000 |

| | | | urban | | | | |
| male | 230 | 221 | 193 | 132 | 40 | 185 | 1000 |
| female | 274 | 233 | 187 | 125 | 22 | 160 | 1000 |
| person | 249 | 226 | 190 | 129 | 32 | 174 | 1000 |
| | | | rural+url | oan | | | |
| male | 348 | 261 | 170 | 98 | 23 | 99 | 1000 |
| female | 401 | 258 | 157 | 89 | 15 | 80 | 1000 |
| person | 369 | 260 | 165 | 94 | 20 | 92 | 1000 |

- 3.2.4.2 It is seen from Statement 3.8 that about 37 per cent of the *literates* were educated, i.e., with level of education *secondary and above including diploma/ certificate course*, and about 9 per cent were *graduates and above*. Among all the categories of persons, that is, rural male, rural female, urban male and urban female, the proportion of the *educated* was the highest among urban males (55 per cent), followed by the urban females (49 per cent) and rural males (31 per cent), and it was the lowest among rural females (25 per cent). The proportion of persons with level of education *graduate and above* was also the highest among urban male-literates (19 per cent) and the lowest among rural female-literates (only 3 per cent). The distribution of persons by general educational level is presented in Statement 3.8.1 for the States and Union Territories. A large variation is observed in the distributions across States and Union Territories for each sex and sector.
- 3.2.4.3 Educational level and MPCE: The number of non-literates and number of educated (i.e., those with general educational level secondary and above including diploma/ certificate course) persons per 1000 persons of age 15 years and above are presented in Statement 3.9 for each monthly per-capita consumer expenditure class at the all-India level. The usual pattern is observed over the MPCE classes in all the categories of persons. The proportion of *non-literates* is found to be the highest in the bottom MPCE class and it decreases gradually as the MPCE increases, and attains the lowest proportion in the top MPCE class. On the other hand, the proportion of the *educated* is found to be the lowest in the bottom MPCE class and the highest in the top MPCE class. In these rates, the differences between the bottom and top MPCE classes are quite pronounced. For instance, while the proportion of non-literates was 69 per cent in the bottom MPCE class in the rural areas, it was 18 per cent in the top MPCE class. The corresponding proportion in the urban areas was about 51 per cent and 2 per cent only. In the case of proportion of the *educated*, the difference, in the rural areas, was as high as 42 percentage points with only 4 per cent educated people in the bottom MPCE class. The difference, in the urban areas, was even more glaring with 78 percentage points and only 9 per cent of the people in the bottom MPCE class were educated, that is, their educational level was secondary and above. Among females, the differences were a little narrower than those among males, as the incidence of literacy itself was much lower among females than among males.

Statement 3.9: Number of non-literates and number of educated persons per 1000 persons of age 15 years and above for each monthly per-capita consumer expenditure (MPCE) class during 2004-05

^{*:} Persons with general educational level secondary and above, including diploma/certificate course, have been considered to be educated.

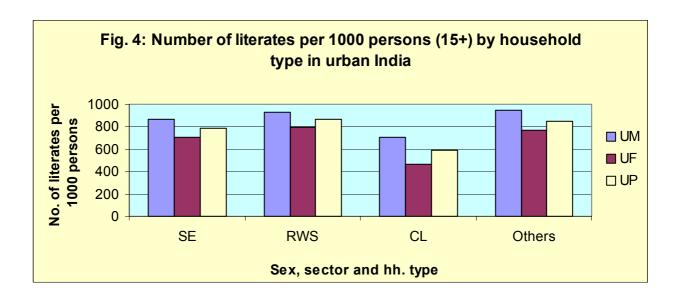

3.2.4.4 Educational level and household type: Statement 3.10 presents the proportion of non-literates and proportion of the educated among persons of age 15 years and above for each household type at the all-India level. Apart from the rural-urban and male-female differences, perceptible differences in the proportion of non-literates and educated were observed across the household types in both the rural and urban areas. As expected, in the rural areas, the proportion of non-literates was higher among persons belonging to the household type rural labour (56 per cent) than among persons belonging to the household type self-employed (41 per cent). Whereas, in the urban areas, the proportion of non-literates was highest among the persons belonging to the household type casual labour (41 per cent) and lowest among the household type regular wage/salaried employees (13 per cent). In the case of the educated, the proportion is found to be the highest for the household type self-employed in non-agriculture (19 per cent) in the rural areas and for the household type others (56 per cent) in the urban areas. Figure 3 presents number of

literates per 1000 persons of age 15 years and above by household type in rural areas and Figure 4 presents number of literates per 1000 person of age 15 years and above in urban areas.

Statement 3.10: Number of non-literate and number of educated persons per 1000 persons of age 15 years and above located in each household type during 2004-05

3.2.5 Technical Education

3.2.5.1 While general education, in this survey, was the highest level of education successfully completed by the members of the household considering general/ technical/ vocational education, a degree in professional education like engineering, medicine, agriculture, etc., a diploma or certificates in agriculture, engineering/technology, medicine, crafts, etc., was included under technical education. The distribution of persons of age 15 years and above by level of attainment of technical education is given in Statement 3.11 at the all-India level. The distinction between the technical courses providing diploma/certificate by their attainment before and after attaining graduation level has also been made and provided in the statement.

3.2.5.2 It is seen that in India, among the persons of age 15 years and above, only 2 per cent had technical degrees or diplomas or certificates. The proportion was only 1 per cent in the rural areas and 5 per cent in the urban areas. Moreover, the rate among females was lower than that among males – the rates being nearly 1 per cent in the rural and about 3 per cent in the urban areas for females, and nearly 2 per cent in the rural and about 7 per cent in the urban areas for males. The distribution of persons by level of attainment of technical education also reveals that among those who had technical education, about 14 per cent had degree in technical education of graduate level or above and the remaining had some certificate or diploma in technical education – about 59 per cent below graduate level and 27 per cent at graduate and above level. Moreover, the proportion of persons with technical degrees of graduate level or above was much higher in the urban areas than in the rural areas, and much higher among males than among females. Among females, this proportion was found to be almost nil in the rural areas as against nearly 10 per cent in the urban areas.

3.3 Current Attendance in Educational Institutions

3.3.1 Current Attendance

3.3.1.1 The current attendance status refers to whether a person was attending any educational institution on the date of survey and was collected for each individual of age below 30 years from the respondent household. It may differ from the formal attendance status ascertained from or reported by educational institution. Persons are classified as attending or not attending; if not attending, it was ascertained whether one ever attended or never attended. Those who were attending were again classified according to the level of attendance: pre-primary, primary and post-primary. Statement 3.12 presents the distribution of persons of age 5-29 years by status of current attendance separately for each sex and sector at the all-India level. It is found that about 50 per cent of the people in the age- group 5-29 years was currently attending educational institution. The said proportion was a little higher for males at 53 per cent than for females (46 per cent). Similar patterns, as in the case for literates, exist over rural-urban and male-female categories. The current attendance rate is found to be the highest among urban males (54 per cent) and lowest among the rural females (44 per cent). On the other hand, among persons who were not currently attending, about 35 per cent never attended any educational institution. Note that this proportion is found to be the lowest among the urban males (17 per cent) and the highest among rural females (47 per cent). The corresponding results for the States and Union Territories are presented in Statement 3.12.1 at the end of this chapter. There is wide variation in the current attendance rates across the rural-urban and male-female categories of the states and union territories.

3.3.2 Current Attendance and Level of Education

3.3.2.1 The distribution of currently attending persons by level of education reveals, to some extent, the drop-out rate at different levels of education. After successfully completing a particular level of education (say, L₁), in the next level (say, L₂) some individuals either do not enroll their names or even after enrolling do not successfully complete that level. The number of persons who either do not enroll in the next level (L₂) or do not successfully complete after enrolling in this level has been termed, for the purpose of this report, as drop-outs at level L₂. The ratio of drop-outs at level L₂ and the persons successfully completing level L₁ is defined as the drop-out rate at level L₂. As per this definition, one can measure the drop-out rate from the number of persons attending in two consecutive levels of education. Though drop-out rates can be calculated at all the levels of general education, for inter-level comparability, number of years in different levels should be the same. Moreover, we assume the data in Statement 3.13, represent a cohort of currently attending persons across broad levels of education as on the mid-point (January 01, 2005) of the survey period and further assume a steady-state distribution of persons across each individual level. Under these conditions, the drop-out rate at 'middle' level only has been calculated here since the duration of both the 'primary' and 'middle' levels of education generally being four years.

3.3.2.2 Statement 3.13 gives the distribution of currently attending persons of age 5-29 years by level of education and drop-out rate (per 1000) at 'middle' level for all-India. It may be seen that about 49 per cent were attending at the primary level, 22 per cent in the next middle level. It is seen that the drop-out rate at the 'middle' level is the highest in the case of rural females (60 per cent), closely followed by rural males (55 per cent) and lowest in the case of urban females (42 per cent).

1000 persons for different agegroups. It is seen that the current attendance rate is higher for the agegroup 5-14 years compared to the age- groups 15-19, 20-24 and 25-29 years for obvious reasons of discontinued drop- out cases as the age of a person progresses. instance, while the overall attendance rate was

50 per cent for the age- group 5-29 years, it was 82 per cent for the age- group 5-14 years, 45 per cent for the age- group 15-19 years, 11 per cent for the age-group 20-24 years which further dropped to 2 per cent for the age- group 25-29 years. The age-specific

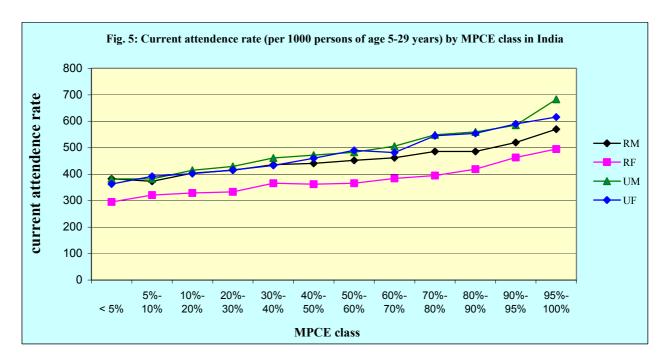

current attendance rate for the States and Union Territories are presented in Statement 3.14.1. Apart from the variations in the current attendance rates across the states, the rate for the age group 5-29 years is found to be the highest in Himachal Pradesh (60 per cent) and the lowest in Orissa (42 per cent)

3.3.4 Current Attendance Rate and Monthly Per Capita Consumer Expenditure Class (MPCE)

3.3.4.1 It has been observed earlier that literacy is closely associated with the level of living of households. It is, therefore, relevant to examine current attendance rate in relation to level of living or its proxy MPCE. In Statement 3.15, the current attendance rate for persons of age 5-29 years is given for each MPCE class at the all-India level separately for the rural and the urban areas. As in the case of literacy rates, the current attendance rate is also found to increase with increase in monthly per capita household expenditure. In the rural areas, the current attendance rate was the lowest at 43 per cent for the bottom MPCE class (i.e., MPCE less than Rs. 235) and was the highest at 58 per cent for the top MPCE class (i.e., MPCE more than or equal to Rs. 1155). The feature was the same for the urban areas too – while the rate was the lowest (46 per cent) for the bottom MPCE class (i.e., MPCE less than Rs. 335), it was the highest (68 per cent) for the top MPCE class (i.e., MPCE more than or equal to Rs. 2540). One notable feature is observed in the gender differentials in the current attendance rates across the MPCE classes: the differences are of the same order across the MPCE classes in both the rural and urban areas, which indicates that the gender bias in current attendance is not associated with the level of living. Figure 5 presents current attendance rate (per 1000 persons of age 5-29 years by MPCE classes in India.

3.3.5 Current Attendance by Type of Institution

3.3.5.1 Type of institution refers to the type of management by which the institution is run. In the survey, the broad types that were considered were *government*, *local body*, *private aided* and *private unaided*. All schools/institutions run by the State Governments, Central Government, Public Sector Undertakings or Autonomous Organisations completely financed by the Government were treated as government institutions. Similarly, all institutions run by municipal corporations, municipal committees, notified area committees, zilla parishads, panchayat samitis, cantonment boards, etc., were treated as local body institutions. A private aided institution was one, which was run by an individual or a private organisation and received maintenance grant from a Government or local body. A private unaided institution was one that was managed by an individual or a private organisation and did not receive maintenance grant either from a Government or a local body.

3.3.5.2 Statement 3.16 gives the per 1000 distribution of persons in the age group 5-29 years who were attending educational institution by type of institution for all-India. It is seen that Government institutions accounted for 63 per cent of the students (i.e., those who were attending), followed by private unaided institutions (17 per cent), private aided institutions (14 per cent) and local body institutions (only 6 per cent). In Statement 3.17, the corresponding estimates for the NSS 52nd round survey are given for the age group 5-24 years, since in NSS 52nd round survey the information was collected for the age group 5-24 years. It is seen that during 1995-96, the Government institutions accounted for about 64 per cent, followed by private (18 per cent), private unaided (11 per cent) and local body institutions (8 per cent). It appears that the role of Government including the local body institutions are educational service provider is gradually shrinking over the years and the private institutions are increasing their share in this sector. The distributions for the rural and urban areas also indicate that the Government institutions are playing a bigger role in catering educational services in the rural areas, where 71 per cent of the students were

attending some Government institutions compared to 41 per cent in the urban areas. Although there is not much difference in the distributions in respect of gender, but there seems to have a little preference for the government or local body institutions for education of the females. In fact, in the rural areas while among the male students, 76 per cent attended government or local body institutions, among the female students about 78 per cent attended government or local body institutions. The corresponding proportions in the urban areas were 45 per cent and 47 per cent, respectively. In Figures 6 and 7, percentage distribution of currently attending persons of age 5-29 years are given for rural and urban areas, respectively.

Note: 1. Source: NSS report no.439 (Attending an Educational Institution in India: Its Level, Nature and Cost, 1995-96).

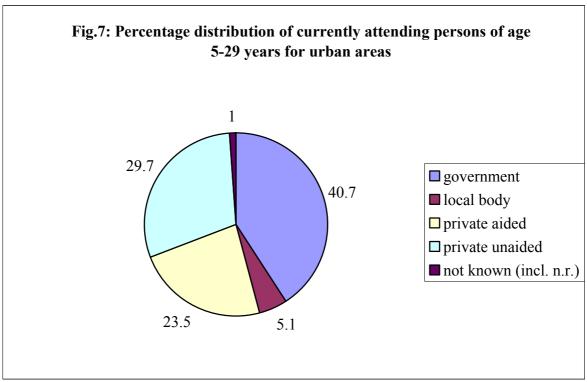

3.3.5.3 State results: It may be seen from Statement 3.16.1 that in the rural areas, there are as many as 15 major states where the share of government institutions in the total students exceeded the national share of 71 per cent. In the rural areas of the major states, the proportion of students attending government institutions was the highest in Tripura (98 per cent) and lowest in Delhi (21 per cent) succeeded by Maharashtra (24 per cent). In the urban areas too, there are as many as 14 major States where the share of Government institutions in the total number of students exceeded the national share of 41 per cent. These States are found to be common between the rural and urban areas. The share of Government institutions in the total number of students, in the urban areas, is found to be the highest in West Bengal (69 per cent) and lowest in Haryana (28 per cent). In the States where the share of Government institutions is found to be low, the private institutions, aided and unaided together, have acted as the major player in providing educational services.

3.3.5.4 Type of institution and level of education: Statement 3.18 gives the per 1000 distribution of persons in the age group 5-29 years who were attending educational institution by type of institution for each level of current attendance at the all-India level. Two important observations can be noted from Statement 3.18. In rural areas, the percentage share of government institutions or the local body institutions among the students generally decreases as the level of education increases and the fall is compensated by the private institution, particularly by the aided one. Contrary to this, in the urban areas, the percentage share of government institutions generally increases and the share of

^{2.} In NSS 52nd round (1995-96), information in respect of current attendance was collected for the age group 5-24 years.

local body institutions decreases as the level of education increases. In the urban areas, private aided institutions played an important role at the secondary, higher secondary and also at higher education levels, just next to government institutions, whereas the role of private unaided institutions in providing services at the primary and middle level was just next to government institutions.

Statement 3.18: Per 1000 distribution of persons of age 5-29 years who were currently attending educational institutions by type of institution for each level of current attendance

3.3.6 Reason for Not Currently Attending

- 3.3.6.1 The reasons for not attending any educational institution were ascertained for persons who were not currently attending. These reasons for currently not attending were ascertained for both who never attended as well as those who ever attended but were not currently attending. In Statement 3.19, the distribution of persons (5-29 years) who were not currently attending any educational institution by reasons for currently not attending is given separately for (a) persons who never attended and (b) persons who ever attended an institution but were not currently attending.
- 3.3.6.2 Ever attended persons: The predominant reason among specified reasons for not attending any educational institution was 'to supplement household income' for males and 'to attend household chores' for females in both the rural and urban areas. In the rural areas, about 67 per cent of males who were currently not attending any educational institution reported the reason 'to supplement household income' and in the urban areas it was 69 per cent of males. The reason 'to attend domestic chores' was reported by 37 per cent of females in the rural areas and 44 per cent of females in the urban areas. About 11 per cent in the rural areas and 9 per cent in the urban areas considered 'education not necessary' and therefore, they were not currently attending any educational institution. Note that about 26 per cent reported 'others', that is, some reasons other than the specified ones in the survey, had been the cause for not attending.
- 3.3.6.3 Never attended persons: Compared to persons who ever attended an institution but were not currently attending, the distribution for persons who never attended is found to be somewhat different. It may be noted that the reasons specified for collection of data in the survey were the same in both the cases. A majority among the never attended persons reported 'education not considered necessary' as the reason for not attending an educational institution. Interesting, this was the predominant reason, unlike the reason 'to attend household chores' or 'to supplement household income' in the case of ever attended persons, for females in both the rural and urban areas. Nevertheless, about 5 per cent in the rural areas and 3 per cent in the urban areas never attended any educational institution as the schools were too far. It may be noted that about 46 to 48 per cent reported 'others' had been the cause for never attended and never attended taken together) any educational institution by reasons for currently not attending for the States and Union Territories are given in Statement 3.19.1 at the end of this chapter. The all-India features are noted for all the States and Union Territories also.

Statement 3.19: Per 1000 distribution of persons of age 5 - 29 years who were currently not attending any educational institution by broad reason for non-attendance separately for (a) **ever attended persons** and (b) **never attended persons**

3.4 Vocational Training

3.4.1.1 In the 60th round survey, for the first time in NSS, information on vocational training was collected only on formal vocational training for persons of age 15-29 years with educational level 'middle school and above but below graduate' and for persons of age 15-29 years and educational level 'graduate in vocational training'. In this round, information in respect of both non-formal and formal vocational training was collected for persons of age 15-29 years. Moreover, information in respect of non-formal vocational training received and formal vocational training received or being received as on the date of survey was collected for persons of age 15-29 years. For the purpose of this survey, a vocational training was broadly defined as a training that prepared an individual for a specific vocation or occupation. The main objective of vocational training is to prepare persons, especially the youth, for the working life and make them employable for a broad range of occupations in various industries and other economic sectors. It aims at imparting training to persons in very specific fields through providing significant 'hands on' experience in acquiring necessary skill, which make them employable or create for them opportunities of self-employment.

3.4.1.2 *Non-formal vocational training*: When the expertise in a vocation or trade was acquired by one, which enabled one to carry out the trade or occupation of one's ancestors

over generations, it was considered, for the purpose of survey, as 'non-formal' vocational training and acquired through 'hereditary' sources. Any other 'non-formal' vocational training received through some sources other than from household members to pursue a vocation that might either be hereditary or other profession, was considered to have been received through 'other' sources.

- 3.4.1.3 *Formal vocational training*: The trainings that took place in institutions which followed a structured training programme and led to recognized certificates, diplomas or degrees was treated as formal vocational training. Formal vocational training had the following characteristics:
 - i) structured training programme towards a particular skill,
 - ii) certificate/ diploma/ degree received are recognised by State/ Central Government, Public Sector and other reputed concerns.
- 3.4.1.4 It may be noted that the persons of age 15-29 years constituted about 26 per cent of the total population in the rural and 29 per cent of the total population in the urban areas. The count of sample persons of age 15-29 years who received non-formal and formal vocational training may not be adequate for getting sufficiently reliable estimates relating to vocational training separately for rural males, rural females, urban males and urban females even at the all-India level. Consequently, the estimates on vocational training have been generated for all-India only. In the following sub-sections, the discussion relating to vocational training has, thus, been confined to the all-India level only.

3.4.2 Status of Vocational Training Received/being Received

3.4.2.1 Statement 3.20 presents the distribution of persons of age 15-29 years by status of vocational training received/ being received, separately for each sex and sector at the all-India level. Of the persons of age 15-29 years, about 1 per cent was receiving formal vocational training as on the date of survey, about 2 per cent reported to have received formal vocational training and another 8 per cent reported to have received non-formal vocational training. The proportion was lower in the case of females than in the case of males in both the rural and urban areas. Moreover, as expected, the proportion was higher in the urban areas than that in the rural areas.

Statement 3.20: Per 1000 distribution of persons in the age group 15-29 years by status of vocational training received or being received

| person | 9 | 32 | 20 | 32 | 24 | | | |

3.4.3.1 The proportion of persons who received formal vocational training presented in Statement 3.21 for different age groups at the all-India level. As expected, the proportion generally increases with age of persons. fact, proportion the increased from 0.6 per cent for the age group 15-19 years to 1.8 per cent for the age group 20-24 years and then, to 1.9 per cent for the age group 25-29 years in the rural areas. The corresponding movement of the said proportion over these age groups, in the urban areas, had been from 1.8 per cent to 6.7 per cent and then, to 6.3 per cent. The age-

specific proportions for females are also much lower than that for the males in both the areas except for the age group 15-20 years in the rural areas.

3.4.4 Formal Vocational Training and Broad Activity Status

3.4.4.1 The proportion of persons who received formal vocational training by broad

Statement 3.22: Number per 1000 persons of different broad usual principal activity status in the age group 15-29 who received formal vocational training

| female | 26 | 143 | 15 | 21 | | | | | |
| person | 25 | 108 | 16 | 24 | | | | | |

activity status is given Statement 3.22 separately for each sex and sector at the all- India level. It is important to note that the proportion is _ found to be the highest among the unemployed and that too, among the females. Among unemployed females, the proportion was as high as 12 per cent in the rural areas and 17 per cent in the urban areas, whereas it was, among the unemployed males, 7 per cent and 12 per cent in the rural and urban

respectively. The proportion was around 2 per cent for persons not in the labour force and 2 to 3 per cent for the employed.

3.4.5 Field of Formal Vocational Training

- 3.4.5.1 Field of training signifies the specific area of the training that a person has obtained in the past and tallies broadly with the specific trade. In the survey ,data in respect of 21 specific areas of trade were collected and the results have been presented in Statement 3.23 in the form of distribution of persons who received formal vocational training by field of training at all-India level. The descriptions of the field of training and corresponding codes are given at the bottom of the statement.
- 3.4.5.2 Statement 3.23 shows that for males, the most demanded field of training was found to be 'computer trades' (code 03: 21 per cent) followed by 'textile related trades' (code 07: 15 per cent), 'electrical and electronic engineering trades' (code 02:11 per cent), 'driving and motor mechanic work' (code 15: 10 per cent) and 'mechanical engineering trades' (code 01: 8 per cent) in the rural areas; and 'computer trades' (code 03: 38 per cent) followed by 'electrical and electronic' (code 02: 11 per cent) and 'mechanical engineering' (code 01: 6 per cent) in the urban areas. Among rural female youths, the demand was a little different. About 31 per cent of them, in the rural areas, the highest proportion among all fields, had formal vocational training in the field of 'textile related work'. This was followed by the 'computer trades' (code 03: 21 per cent) and 'health and

paramedical related work' (code 13: 10 per cent). Among the urban female youths, the choices in terms of proportions were 'computer trades' (code 03: 39 per cent), 'textile related work' (code 07: 18 per cent) and 'health and paramedical related work' (code 13: 9 per cent).

3.4.6 Institution of Formal Vocational Training

3.4.6.1 Usually, vocational training has been oriented towards a number of engineering and technical trades. Though they continue to form the core of vocational training, its scope was considerably widened to include many non-engineering trades also. Some of the major sources from where vocational training could be received were collected in the survey and the distribution of persons who received formal vocational training by institution of training has been presented in Statement 3.24 separately for each sex and sector at the all- India level. The types of institute of training and corresponding codes are given at the bottom of the statement. The statement reveals that field of training is related with the institute of training. The Industrial Training Institutes (ITIs), Industrial Training Centres (ITCs), recognised Motor Driving Schools, Schools offering Vocational Courses, Polytechnics, Institutes run by Companies/Corporations, UGC together played the major role in providing training to male youths. The Craft Institutes, Industrial Training Institutes (ITIs), Industrial Training Centres (ITCs), Schools offering Vocational Courses, Nursing Institutes, Hospital and Medical Training Institutes, Institutes run by Companies/Corporations and Nursery Teacher's Training Institutes contributed significantly in imparting training to female youths in the country.

Appendix B

Sample Design and Estimation Procedure

Appendix - B

Sample Design and Estimation Procedure

1 Introduction

1.1 The 61st round (July 2004-June 2005) of the NSS was earmarked for survey on 'Household Consumer Expenditure' and 'Employment and Unemployment'. The survey covered the whole of the Indian Union *except* (i) Leh and Kargil districts of Jammu & Kashmir, (ii) interior villages of Nagaland situated beyond 5 kilometres of the bus route and (iii) villages in Andaman and Nicobar Islands which remained inaccessible throughout the year. All the sample first-stage units of the districts Poonch and Rajouri of Jammu & Kashmir, all rural samples of the district Doda of Jammu & Kashmir, and all rural samples of the district Nicobar of Andaman and Nicobar Islands became casualty and therefore, the district Poonch and Rajouri of Jammu & Kashmir, rural areas of district Doda of Jammu & Kashmir and rural areas of the district Nicobar of Andaman and Nicobar Islands are outside the survey coverage. The survey period was divided into four sub-rounds of three months duration each and an equal number of sample villages/blocks (FSUs), as far as possible, were allotted for survey in each of these four sub-rounds.

2 Sample Design

- 2.1 A stratified multi-stage sampling design for rural as well as urban areas was adopted for selection of the sample units for the 61st round survey. The first-stage units (FSUs) were the census 2001 villages (panchayat wards for Kerala) for rural areas and the NSSO Urban Frame Survey (UFS) blocks for urban areas. The ultimate-stage units (USUs) were the households for both rural and urban areas. Hamlet-groups/sub-blocks constituted the intermediate stage whenever these were formed in the sample FSUs.
- 2.2 Selection of the first-stage units: The various steps involved before making the selection of the FSUs are discussed at length in the following few paragraphs before taking up the issue of selection of USUs within an FSU.
- 2.2.1 Sampling frame for the first-stage units (FSUs): For rural areas, the list of 2001 census villages constituted the sampling frame for selection of sample FSUs for most of the States. For the rural areas of Kerala, however, the list of panchayat wards was used as the sampling frame for selection of panchayat wards. For the urban areas, the latest lists of UFS blocks constituted the sampling frame for selection of sample FSUs.
- 2.2.2 Stratification of the first-stage units: Within each district of a State/UT, two separate basic strata were formed as follows:
 - 1. rural stratum comprising all rural areas of the district
 - 2. urban stratum comprising all the urban areas of the district.

However, if there were one or more towns with population 10 lakhs or more as per population census of 2001 in a district, each of them formed a separate basic stratum and the remaining urban areas of the district was considered as another basic stratum. As per census of 2001, there were 27 towns each with a population of 10 lakhs or more at the all-India level.

- 2.2.3 Sub-stratification of the first-stage units in rural areas: Within a district, if r FSUs were allocated to a rural stratum, a total of r/2 sub-strata were formed within that rural stratum. The villages within the stratum were first arranged in ascending order of population as per the frame and then r/2 sub-strata were formed in such a way that each sub-stratum comprised a group of villages of the arranged frame having more or less equal populations.
- 2.2.4 Sub-stratification of the first-stage units in urban areas: Within a district, if u number of FSUs were allocated to urban stratum, a total number of u/2 sub-strata were formed within that urban stratum. The towns within the stratum, except those with populations of 10 lakhs or more, were first arranged in ascending order of population as per the frame and then UFS blocks of each town were arranged by IV unit no. \times block no. in ascending order of the number. From this arranged frame of UFS blocks of all the towns within the stratum, u/2 substrata were formed in such a way that each sub-stratum had more or less an equal number of UFS blocks. For towns with populations of 10 lakhs or more, the urban blocks were first arranged by IV unit no. \times block no. in ascending order of the number and then u/2 sub-strata were formed in such a way that each sub-stratum had more or less equal number of UFS blocks.
- 2.2.5 Allocation of FSUs among Strata: At the all-India level, a total number of 12,784 FSUs (8,124 villages and 4,660 urban blocks) was allocated for survey and this was allocated to the different States and UTs in proportion to population as per census of 2001 subject to the availability of investigators, ensuring more or less uniform work-loads. The State/UT level sample size was then allocated between rural and urban sectors in proportion to population as per census of 2001 with 1.5 weightage to urban sector subject to the restriction that urban sample size for bigger States like Maharashtra, Tamil Nadu, etc., should not exceed the rural sample size. A minimum of 8 FSUs has been allocated to each State/UT separately for rural and urban areas. Within each of the rural and urban sectors of a State/UT, the respective sample size was allocated to the different strata in proportion to the stratum population as per census of 2001. Allocations at stratum level, for both rural and urban strata, were adjusted to a multiple of 4 with a minimum sample size of 4.
- 2.2.6 Selection of first-stage units: From each sub-stratum of the rural stratum of a district, two FSUs were selected with probability proportional to size with replacement (PPSWR), size being the population as per population census of 2001. From each sub-stratum of the urban stratum of a district, two FSUs were selected with simple random sampling without replacement (SRSWOR). Within each sub-stratum, samples were drawn in the form of two independent sub-samples in both the rural and urban sectors.

- 2.3 Selection of Ultimate-stage Units within an FSU: The remaining paragraphs of this subsection outlines the various steps leading to the actual selection of USUs within an FSU.
- 2.3.1 Selection of hamlet-groups/sub-blocks: Each large village/block having an approximate present population of 1,200 or more was divided into a suitable number of hamlet-groups in the rural areas and sub-blocks in the urban areas as given below:

| approximate present population of the sample village/block | number of hamlet-groups / sub-blocks formed |
|--|---|
| less than 1200 | 1 @ |
| 1200 to 1799 | 3 |
| 1800 to 2399 | 4 |
| 2400 to 2999 | 5 |
| 3000 to 3599 | 6 |
| and so on | |

^{@ &#}x27;number of hamlet-groups / sub-blocks formed = 1' indicates that the whole FSU was considered for listing.

For rural areas of Himachal Pradesh, Sikkim and Poonch, Rajouri, Udhampur and Doda districts of Jammu and Kashmir and Idukki district of Kerala, the large villages were divided into a suitable number of hamlet-groups as follows:

| approximate present population of the sample village | number of hamlet- groups formed |
|--|------------------------------------|
| less than 600 | 1 @ |
| 600 to 899 900 to 1199 | 3 4 |
| 1200 to 1499 | 5 |
| and so on | |

^{@ &#}x27;number of hamlet-groups formed = 1' indicates that the whole FSU was considered for listing.

Hamlet-groups/sub-blocks were formed by more or less equalising populations. Two hamlet-groups/sub-blocks are selected from a large village/UFS block by SRSWOR. Listing and selection of the households were done independently in the two selected hamlet-groups/sub-blocks.

2.3.2 Sampling frame of households: All households listed in a village/UFS block where no hamlet-group/sub-block formation was done, or the households listed in the two selected hamlet-groups/sub-blocks of the village/UFS block where hamlet-group/sub-block formation was done, constituted the sampling frame of households.

2.3.3 Stratification of rural households: For the employment and un-employment survey of the 61st round, all households listed in the selected village/block/ hamlet-groups/sub-blocks were stratified into three second-stage strata (SSS). The three second-stage strata (SSS) formed in the rural areas were:

SSS 1: relatively affluent households

SSS 2: from the remaining households, households having principal earning from non- agricultural activity

SSS 3: other households

A household was classified as 'affluent' if the household (i) owned any of the items like motor car/ jeep/ tractor/ truck/ bus/ van/ colour TV/ DVD/ VCP/ telephone/ fridge/ washing machine, etc., or (ii) one of the household member was a professional such as a doctor, an advocate etc. or (iii) the household owned 7 hectares or more of cultivable land/3.5 hectares or more of irrigated land or (iv) owned at least 10 heads of cattle or buffaloes.

2.3.4 Stratification of urban households: The three second-stage strata (SSS) formed in the urban areas were:

SSS 1: households with MPCE > A

SSS 2: households with MPCE such that $B \leq MPCE \leq A$

SSS 3: households with MPCE < B

The two cut-off points 'A' and 'B' were determined at NSS Region level in such a way that the top 10% of households had MPCE more than 'A' and the bottom 30% had MPCE less than 'B'.

- 2.3.5 Selection of households: For the employment and unemployment survey, a total of 10 households were selected from each sample village/block. In both rural and urban areas, in case no hamlet-group/sub-block formation was done in the village/block, a number of 2, 4 and 4 households were selected from the second stage strata SSS#1, SSS#2 and SSS#3, respectively. In case hamlet-groups/sub-blocks were formed in the village/block, a number of 1, 2 and 2 households were selected respectively from the second-stage strata SSS#1, SSS#2 and SSS#3 of each of the hamlet-groups/sub-blocks. The sample households from each of the second-stage strata were selected by SRSWOR.
- 2.4 The number of village/blocks allotted for survey in the NSS 61st round along with the number of village/blocks actually surveyed and number of persons enumerated in respect of employment and unemployment survey are given for different States and union territories in Table 1 at the end of Appendix-B.

3 Estimation Procedure

Procedures for obtaining estimates of aggregates, ratios and their RSEs is briefly indicated below:

3.1 Notation:

```
s = subscript for s-th stratum
t = subscript for sub-sample (m = 1, 2)
i = subscript for i-th FSU [village (panchayat ward) / block]
d = subscript for a hamlet-group/sub-block (d = 1, 2)
j = subscript for j-th second stage stratum in an FSU/ hg/sb (j = 1, 2 or 3)
k = subscript for k-th sample household under a particular second-stage stratum within an FSU/ hg/sb
D = total number of hg's/sb's formed in the sample village (panchayat ward) / block
D* = 1 if D = 1
= D / 2 for FSUs with D > 1
N = total number of FSUs in any urban sub-stratum
Z = total size of a rural sub-stratum (= sum of sizes for all the FSUs of a rural sub-stratum)
z = size of sample village used for selection.
n = number of sample village / block surveyed including zero cases but excluding casualty for
```

- a particular sub-sample and sub-stratum. H = total number of households listed in a second-stage stratum of a village/block/hamlet-group/sub-block of sample FSU
- h = number of households surveyed in a second-stage stratum of a village/block/hamlet-group/sub-block of sample FSU
- x, y = observed values of the characteristics x, y under estimation
- \hat{X} , \hat{Y} = estimates of population totals X, Y for the characteristics x, y

Under the above notation,

 $y_{stmidjk}$ = observed value of the characteristic y for the k-th household in the j-th second stage stratum of the d-th hg/sb (d = 1, 2) of the i-th FSU belonging to the m-th sub-sample for the t-th sub-stratum of s-th stratum;

For ease of understanding, a few symbols have been suppressed in the following paragraphs in case they are obvious.

- 3.2 Estimation of aggregates for a particular sub-sample (m) and stratum (s):
- 3.2.1 Estimate for a sub-stratum in rural areas:

Estimate for *j*-th second stage stratum,

$$\hat{Y}_{j} = \frac{Z}{n_{j}} \sum_{i=1}^{n_{j}} \frac{1}{z_{i}} D_{i}^{*} \left[\frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

Estimate for sub-stratum (t),

$$\hat{Y} = \sum_{i} \hat{Y}_{j}$$

3.2.2 Estimate for a sub-stratum in urban areas:

Estimate for *j*-th second stage stratum,

$$\hat{Y}_{j} = \frac{N}{n_{j}} \sum_{i=1}^{n_{j}} D_{i}^{*} \left[\frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

Estimate for sub-stratum (t),

$$\hat{Y} = \sum_{i} \hat{Y}_{j}$$

3.2.3 *Estimate for a stratum of a sub-sample (m)*:

Estimate for stratum s,

$$\hat{Y}s = \sum_{t} \hat{Y}st$$

3.3 Overall Estimate for Aggregates: Overall estimate for aggregates for a stratum (\hat{Y}_s) based on two sub-samples is obtained as:

$$\hat{Y}_{s} = \frac{1}{2} \sum_{m=1}^{2} \hat{Y}_{sm}$$

3.4 Overall Estimate of Aggregates at State/UT/all-India level:

The overall estimate \hat{Y} at the State/UT/all-India level was obtained by summing the stratum estimates \hat{Y}_s over all strata belonging to the State/UT/all-India.

3.5 *Estimates of Ratios*: Let \hat{Y} and \hat{X} be the overall estimate of the aggregates Y and X for two characteristics \hat{Y} and \hat{X} respectively at the State/UT/all-India level.

Then the combined ratio estimate (\hat{R}) of the ratio $(R = \frac{Y}{X})$ is obtained as

$$\hat{R} = \frac{\hat{Y}}{\hat{X}}.$$

- 3.6 Estimates of Error: The estimated variances of the above estimates are as follows:
- 3.6.1 For aggregate \hat{Y} :

$$V\hat{a}r(\hat{Y}) = \sum_{s} V\hat{a}r(\hat{Y}_{s})$$

where $V \hat{a} r (\hat{Y}_s)$ are as given below.

3.6.1.1. For strata with PPSWR selection at first-stage:

$$V\hat{a}r_{ppswr}(\hat{Y}_s) = \left[\sum_{t} \frac{1}{n_{st}(n_{st}-1)} \sum_{i=1}^{n_{st}} \left(\frac{Z_{st}\hat{Y}_{sti}}{z_{sti}} - \hat{Y}_{st}\right)^2\right],$$

where
$$\hat{Y}_{sti} = \sum_{i} Y_{stij}$$
,

$$\hat{Y}_{stij} = D_{sti}^* \left[\frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

3.6.1.2 For strata with SRSWOR selection at first-stage:

$$Va\hat{r}_{srswor}(\hat{Y}_s) = \sum_{t} \frac{1}{4} (\hat{Y}_{st1} - \hat{Y}_{st2})^2 \quad ,$$

where \hat{Y}_{st1} and \hat{Y}_{st2} are the estimates for sub-sample 1 and sub-sample 2, respectively, for stratum 's' and sub-stratum 't'.

3.6.2 For ratio $\,\hat{R}$:

$$M\hat{S}E(\hat{R}) = \frac{1}{(\hat{X})^2} \left[\sum_{s} M\hat{S}_s(\hat{R}) + \sum_{s'} M\hat{S}_{s'}(\hat{R}) \right]$$

where (i) s, s' indicate, respectively, the strata with PPSWR and SRSWOR selection at first-stage,

(ii)
$$M\hat{S}_s(\hat{R}) = \sum_t \frac{1}{n_{st}(n_{st}-1)} \sum_{i=1}^{n_{st}} \left[\frac{Z_{st}}{z_{sti}} (\hat{Y}_{sti} - \hat{R}\hat{X}_{sti}) - (\hat{Y}_{st} - \hat{R}\hat{X}_{st}) \right]^2$$

where

$$\hat{Y}_{stij} = \sum_{j} \hat{Y}_{stij} , \quad \hat{X}_{sti} = \sum_{j} \hat{X}_{stij} ,$$

$$\hat{Y}_{stij} = D^*_{sti} \left[\frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{si1j}} y_{i1jk} + \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{si2j}} y_{i2jk} \right],$$

$$\hat{X}_{stij} = D^*_{sti} \left[\frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{si1j}} x_{i1jk} + \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{si2j}} x_{i2jk} \right]$$

(iii)
$$M\hat{S}_{s'}(\hat{R}) = \sum_{t=1}^{1} \frac{1}{4} \left[(\hat{Y}_{s't1} - \hat{Y}_{s't2})^2 + \hat{R}^2 (\hat{X}_{s't1} - \hat{X}_{s't2})^2 - 2\hat{R} (\hat{Y}_{s't1} - \hat{Y}_{s't2}) (\hat{X}_{s't1} - \hat{X}_{s't2}) \right]$$

where $\hat{Y}_{s't1}$ and $\hat{Y}_{s't2}$ are the estimates for sub-sample 1 and sub-sample 2, respectively, for stratum s' and sub-stratum t.

3.7 *Estimates of RSE*:

$$R\hat{S}E(\hat{Y}) = \frac{\sqrt{V\hat{a}r(\hat{Y})}}{\hat{Y}} \times 100$$

$$R\hat{S}E(\hat{R}) = \frac{\sqrt{M\hat{S}E(\hat{R})}}{\hat{R}} \times 100$$

Table 1: Number of villages/ blocks allotted, number of villages/ blocks surveyed and number of persons enumerated in different States and Union Territories

| | | villages | / blocks | | | , 1 |

Codes for Block 3.1

- col. (2): **nature of loan**: hereditary loan -1, loan contracted in cash -2, loan contracted in kind -3, loan contracted partly in cash and partly in kind -4.
- col. (3): **source**: government -1, co-operative society -2, bank -3, employer/landlord -4, agricultural/professional money lender -5, shopkeeper/trader -6, relatives/friends -7, others -9.
- col. (4): purpose: household consumption: medical expenses -1, educational expenses -2, legal expenses -3, other expenses -4; marriage and other ceremonial expenses -5, purchase of land/construction of building -6, productive purpose -7, repayment of debt -8, others -9.

Codes for Block 4

col. (3): relation to head:

self -1, spouse of head -2, married child -3, spouse of married child -4, unmarried child -5,grandchild -6, father/ mother/ father-in-law/ mother-in-law -7, brother/ sister/ brother-in-law/ sister-in-law/ other relatives -8, servants/ employees/ other non-relatives -9.

col. (6): marital status:

never married -1, currently married -2, widowed -3, divorced/separated -4.

col. (7): educational level - general:

not literate -01, literate without formal schooling: EGS/NFEC/AEC -02, TLC -03, others -04; literate: below primary -05, primary -06, middle -07, secondary -08, higher secondary -10, diploma/certificate course -11, graduate -12, postgraduate and above -13.

col. (8): educational level - technical:

no technical education -01,

technical degree in agriculture/ engineering/ technology/ medicine, etc. -02, diploma or certificate (below graduate level) in: agriculture -03, engineering/ technology -04, medicine -05, crafts -06, other subjects -07;

diploma or certificate (graduate and above level) in: *agriculture -08*, *engineering/technology -09*, *medicine -10*, *crafts -11*, *other subjects -12*.

col. (9): status of current attendance:

currently not attending:

never attended: school too far -01, to support household income -02, education not considered necessary -03, to attend domestic chores -04, others -05;

ever attended but currently not attending: school too far -11, to support household income -12, education not considered necessary -13, to attend domestic chores -14, others -15;

currently attending in: EGS/NFEC/AEC -21, TLC -22, pre-primary (nursery/Kinder garten, etc.) -23, primary (class I to IV/V) -24, middle -25, secondary and higher secondary -26, graduate & above in: agriculture -27, engineering/technology -28, medicine -29, other subjects -30; diploma or certificate (below graduate level) in: agriculture -31, engineering/technology -32, medicine -33, crafts -34, other subjects -35; diploma or certificate (graduate and above level) in: agriculture -36, engineering/technology -37, medicine -38, crafts -39, other subjects -40.

col. (10): **type of institution**: government -1, local body -2, private aided -3, private unaided -4, not known -5.

col. (12): whether receiving/received any vocational training:

yes: receiving formal vocational training -1; received vocational training: formal -2, non-formal: hereditary -3, others -4; did not receive any vocational training -5.

col. (13): field of training:

mechanical engineering trades -01, electrical and electronic engineering trades -02, computer trades -03, civil engineering and building construction related works -04, chemical engineering trades -05, leather related work -06, textile related work -07, catering, nutrition, hotels and restaurant related work -08, artisan/ craftsman/ handicraft and cottage based production work -09, creative arts/ artists -10, agriculture and crop production related skills and food preservation related work -11, non-crop based agricultural and other related activities -12, health and paramedical services related work -13, office and business related work -14, driving and motor mechanic work -15, beautician, hairdressing & related work -16, work related to tour operators/ travel managers -17, photography and related work -18, work related to childcare, nutrition, pre-schools and crèche -19, journalism, mass communication and media related work -20, printing technology related work -21, other -99.

col. (15): source from where degree/diploma/certificate received/to be received:

Industrial Training Institutes (ITIs)/Industrial Training centers (ITCs) -01, School offering vocational courses (Secondary, Higher Secondary level) -02, UGC (first degree level) -03, Polytechnics -04, Community Polytechniques/ Jansiksha Sanstha -05, National Open School -06, Hotel Management Institutes -07, Food craft & Catering Institutes -08, Small Industries Service Institutes/District Industries Centres/Tool Room Centres -09, Fashion Technology Institutes -10, Tailoring, Embroidery and Stitch Craft Institutes -11, Nursing Institutes -12, Rehabilation/ Physiotheraphy /Ophthalmic and Dental Institutes -13, Institutes giving Diploma in Pharmacy -14, Hospital and Medical Training Institutes -15, Nursery Teachers' Training Institutes -16, Institutes offering training for Agricultural Extension -17, Training provided by Carpet Weaving Centers -18, Handloom/ Handicraft Design Training Centers/ KVIC -19, Recognised Motor Driving Schools -20, Institutes for Secretariat Practices -21, Recognised Beautician Schools -22, Institutes run by Companies/ Corporations -23, Institutes for Journalism and Mass Communication -24, other institutes -99.

col. (16): whether a beneficiary of the scheme during last 365 days:

yes: annapurna -1, ICDS -2, midday meal -3, food for work -4; no -5.

Codes for Block 5.1

col. (3): **status**:

worked in h.h. enterprise (self-employed): own account worker -11, employer-12, worked as helper in h.h. enterprise (unpaid family worker) -21; worked as regular salaried/ wage employee -31, worked as casual wage labour: in public works -41, in other types of work -51; did not work but was seeking and/or available for work -81, attended educational institution -91, attended domestic duties only -92, attended domestic duties and was also engaged in free collection of goods (vegetables, roots, firewood, cattle feed, etc.), sewing, tailoring, weaving, etc. for household use -93, rentiers, pensioners, remittance recipients, etc. -94, not able to work due to disability -95, others (including begging, prostitution, etc.) -97.

- col. (5): industry: 5-digit code as per NIC -98.
- col. (6): occupation: 3-digit code as per NCO -68.
- col. (8): location of workplace:

no fixed workplace -10, workplace in rural areas and located in: own dwelling -11, own enterprise/unit/office/shop but outside own dwelling -12, employer's dwelling -13, employer's enterprise/ unit/office/shop but outside employer's dwelling -14, street with fixed location -15, street without fixed location -16, construction site -17, others -19; workplace in urban areas and located in: own dwelling -21, own enterprise/unit/office/shop but outside own dwelling -22, employer's dwelling -23, employer's enterprise/unit/office/shop but outside employer's dwelling -24, street with fixed location -25, street without fixed location -26, construction site -27, others -29.

col. (9): enterprise type:

proprietary: male -1, female -2; partnership: with members from same hh. -3, with members from different hh. -4; Government/public sector -5, Public/Private limited company -6, Co-operative societies/trust/other non profit institutions -7, employer's households(i.e., private households employing maid servant, watchman, cook, etc.) -8, others -9.

- col. (11): **number of workers in the enterprise**: less than 6 -1, 6 to 9 -2, 10 & above but less than 20 -3, 20 & above -4, not known -9.
- col. (12): type of job contract: no written job contract -1; written job contract: for 1 year or less -2, more than 1 year to 3 years -3, more than 3 years -4.

- col. (14): availability of social security benefits:
 eligible for: only PF/pension (i.e., GPF, CPF, PPF, pension, etc.) -1,
 only gratuity -2, only health care & maternity benefits -3, only PF/pension
 and gratuity -4, only PF/pension and health care & maternity benefits -5,
 only gratuity and health care & maternity benefits -6, PF/pension, gratuity.
- health care & maternity benefits -7; not eligible for any of above social security benefits -8.

 col. (15): method of payment: regular monthly salary -1, regular weekly payment -2,
- col. (16): **period of seeking/available for work during last 365 days**: sought/available for: less than 1 month -1, 1 to 2 months -2, 3 to 6 months -3, 7 to 9 months -4, 10 to 12 months 5; did not seek/ not available -6.
- col. (17): **seeking or available or suitable for the type of occupation**:
 3 -digit code as per NCO-68.
- col. (18): whether participated voluntarily without remuneration in production of goods and services: yes: production of goods in: philanthropic organization/institution -1, others -2; production of services in: philanthropic organization/institution -3, others -4; no -5.
- col. (19): industry group: 3 digit industry group code as per NIC- 98.

daily payment -3, piece rate payment -4, others - 5.

Codes for Block 5.2

- col. (3): status: codes as in col. 3, block 5.1. (only codes 11 to 51 are applicable here).
- col. (5): industry: 5-digit code as per NIC-98.
- col. (6): occupation: 3-digit code as per NCO-68.
- col. (7): location of workplace: codes as in col. 8, block 5.1.
- col. (8): enterprise type: codes as in col. 9, block 5.1.
- col. (10): number of workers in the enterprise: codes as in col. 11, block 5.1.
- col. (11): type of job contract: codes as in col. 12, block 5.1.
- col. (13): availability of social security benefits: codes as in col. 14, block 5.1.
